

ELASTIC HOSIERY.

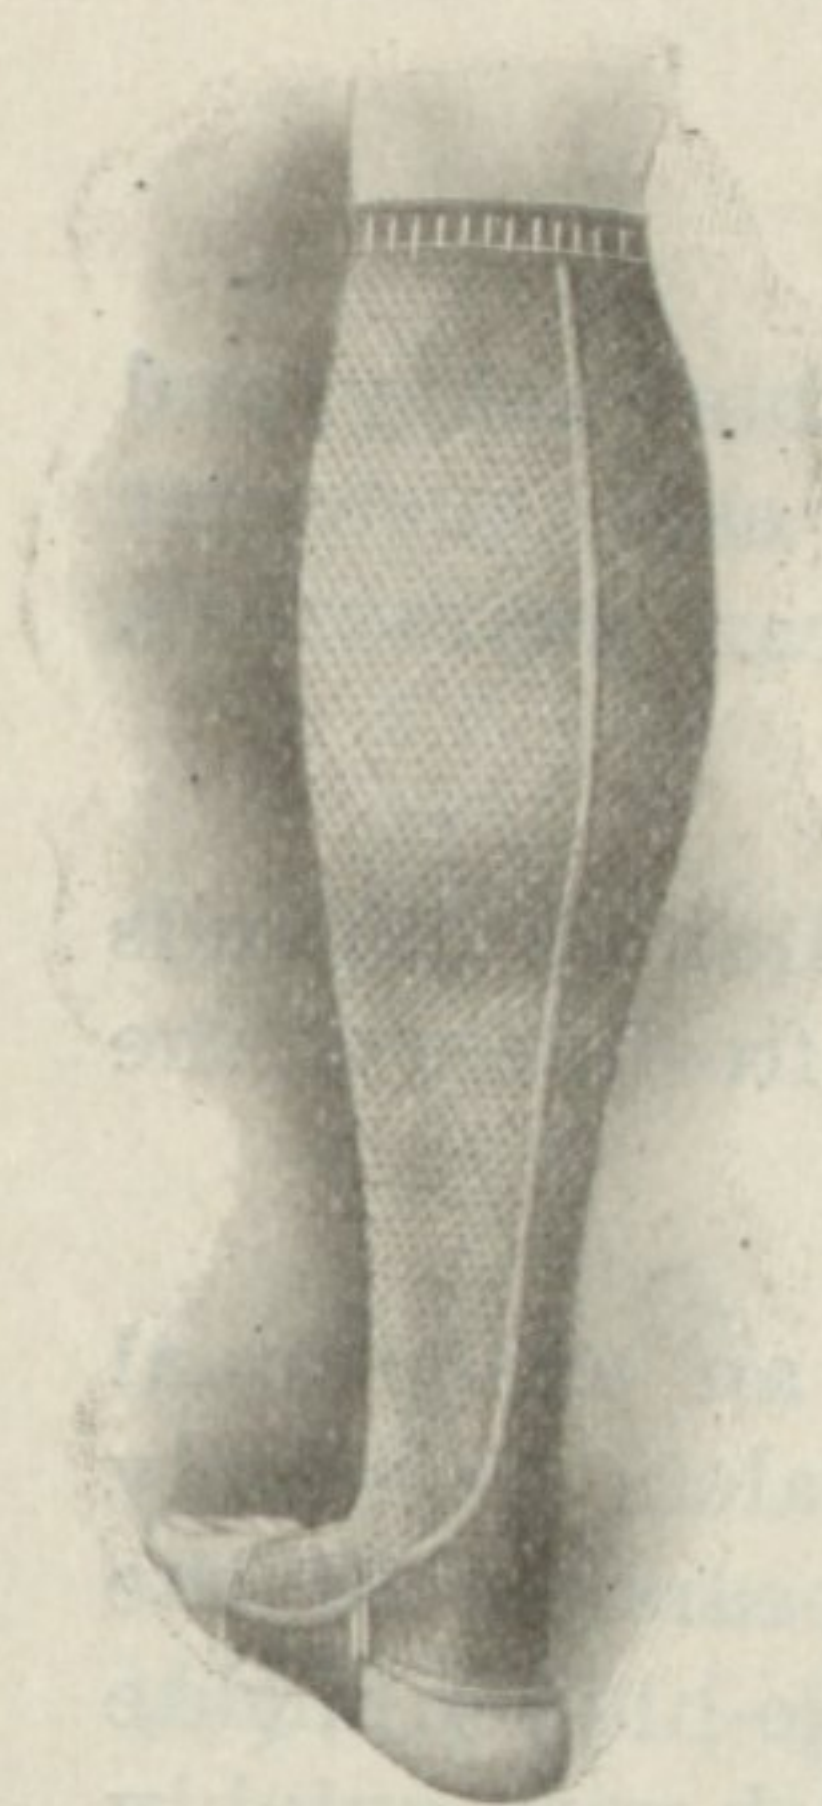

Fig. 1.
Illustrating our
Seamless Heel.

All our regular Elastic Stockings have the Seamless Heel, as shown on Fig. 1, to avoid chafing the heel and prevent extreme stretching of the weaving around the ankle. We find that, after years of experience, they are far superior to the straight back seam, as shown on Fig. 2, usually found on cheap hosiery.

Directions for Measurements.

Wherever possible take the measurement in the morning before rising, as the limbs usually become swollen later in the day. Give the exact measurement without imbedding or drawing tape line too firmly. We allow for expansion to obtain pressure on the limb. Give measurements at points indicated on the illustration desired; and for a Garter Hose, give the length from the floor to the garter line (*E*) on inside of limb. For a Stocking intended for above the knee, give length from the floor to the knee (*F*) and length from the knee to height desired on inside of limb. Send for measurement blanks; we cheerfully furnish same.

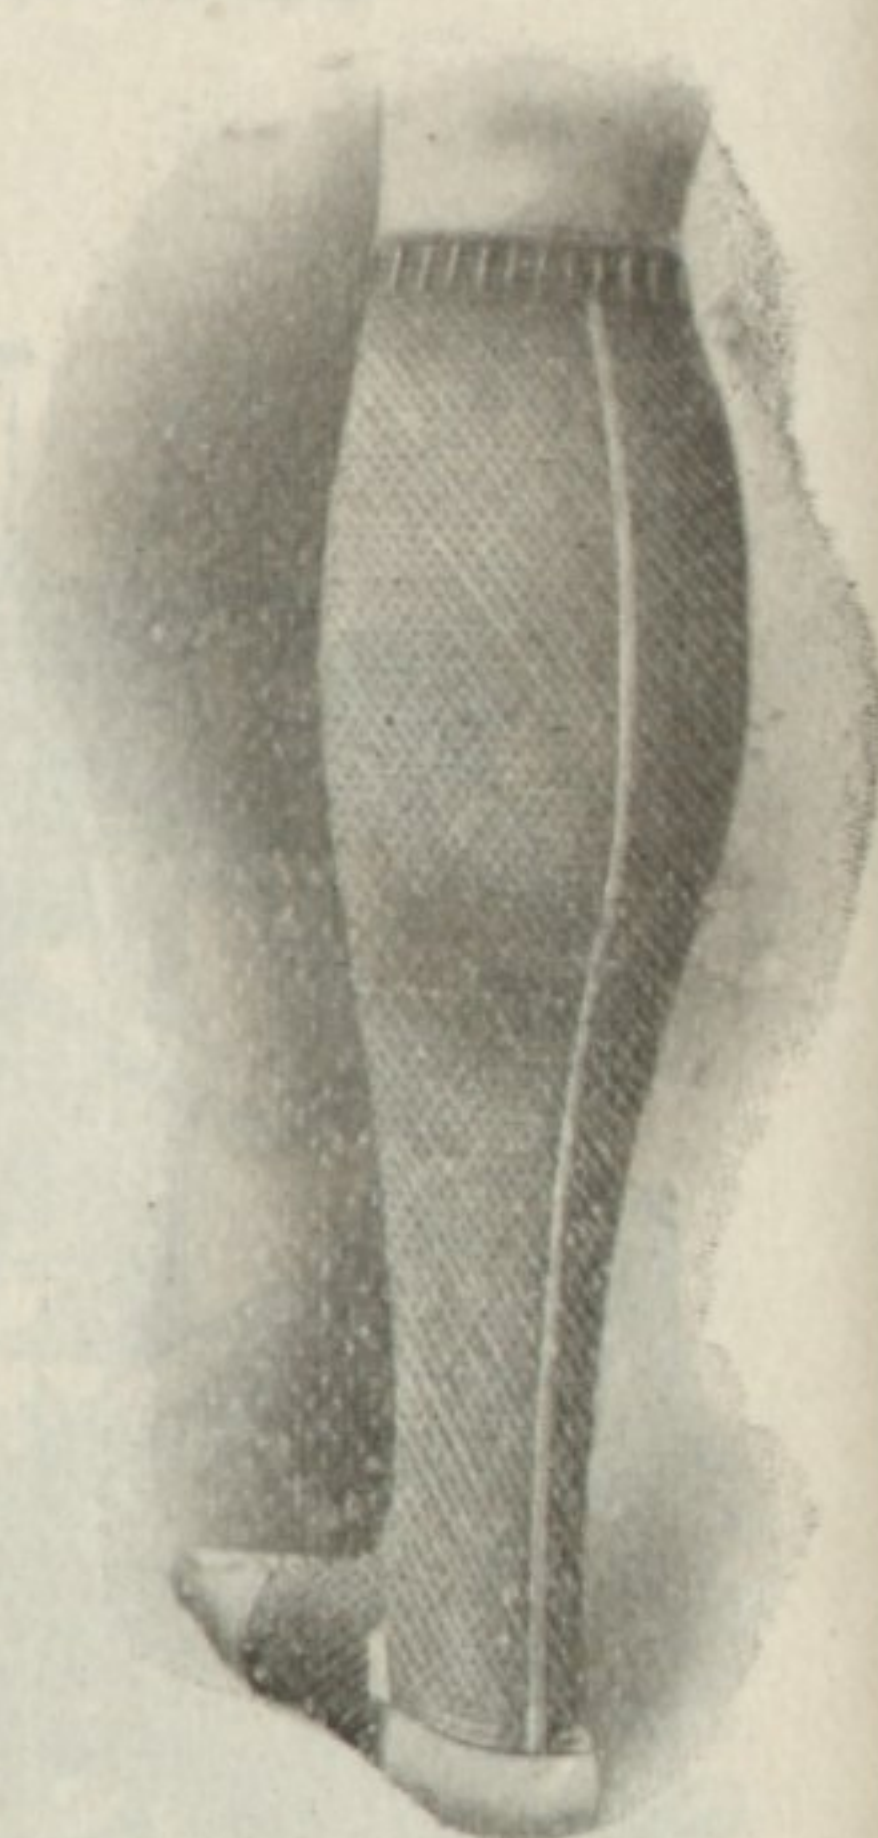

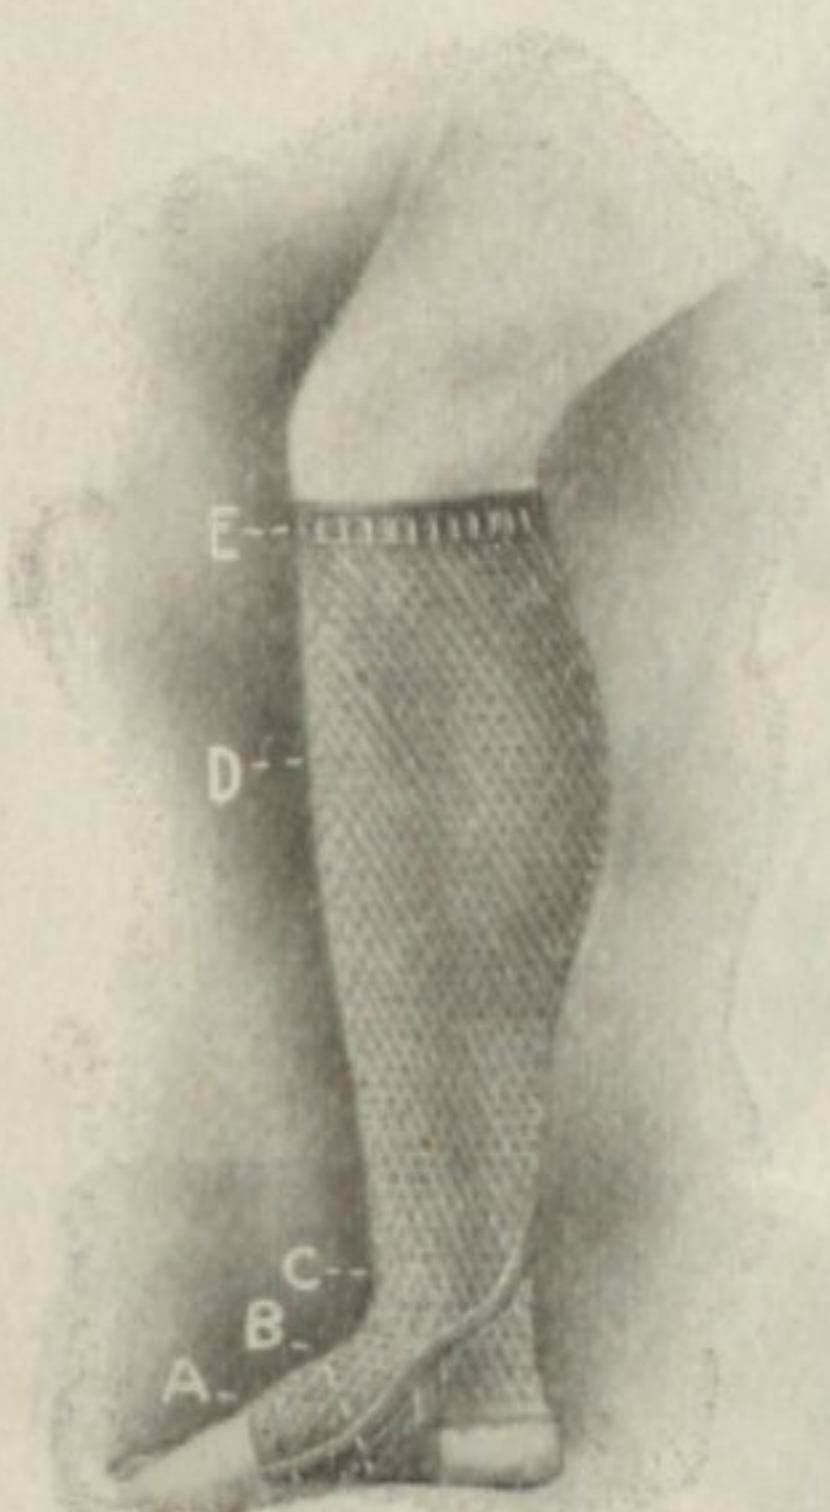

Fig. 2.
Illustrating the
Straight Back Seam.

THE GARTER STOCKING.

We make these in the two styles of heel, one having a seamless heel to prevent chafing and the other with the ordinary straight back seam as described above.

Garter Stocking.

	Seamless Heel.	Ordinary Heel.
Heavy Tsatlee Silk	\$4 00	\$3 00
Medium Japan Silk	3 50	2 75
Light Silk.....	3 00	2 50
Cotton.....	2 25	2 00

Give circumference at *A*, *B*, *C*, *D*, *E* and length from floor to *E* on inside of limb.

Prices are for single pieces to patients.
