

## WOCHER'S STANDARD TRUSS.

### THE MOST COMFORTABLE AND BEST-FITTING TRUSS.

This truss is constructed to hold the most severe as well as the slightest case of hernia with least discomfort to the wearer.

It is especially well adapted for old persons or those who desire a soft-padded comfortable article.

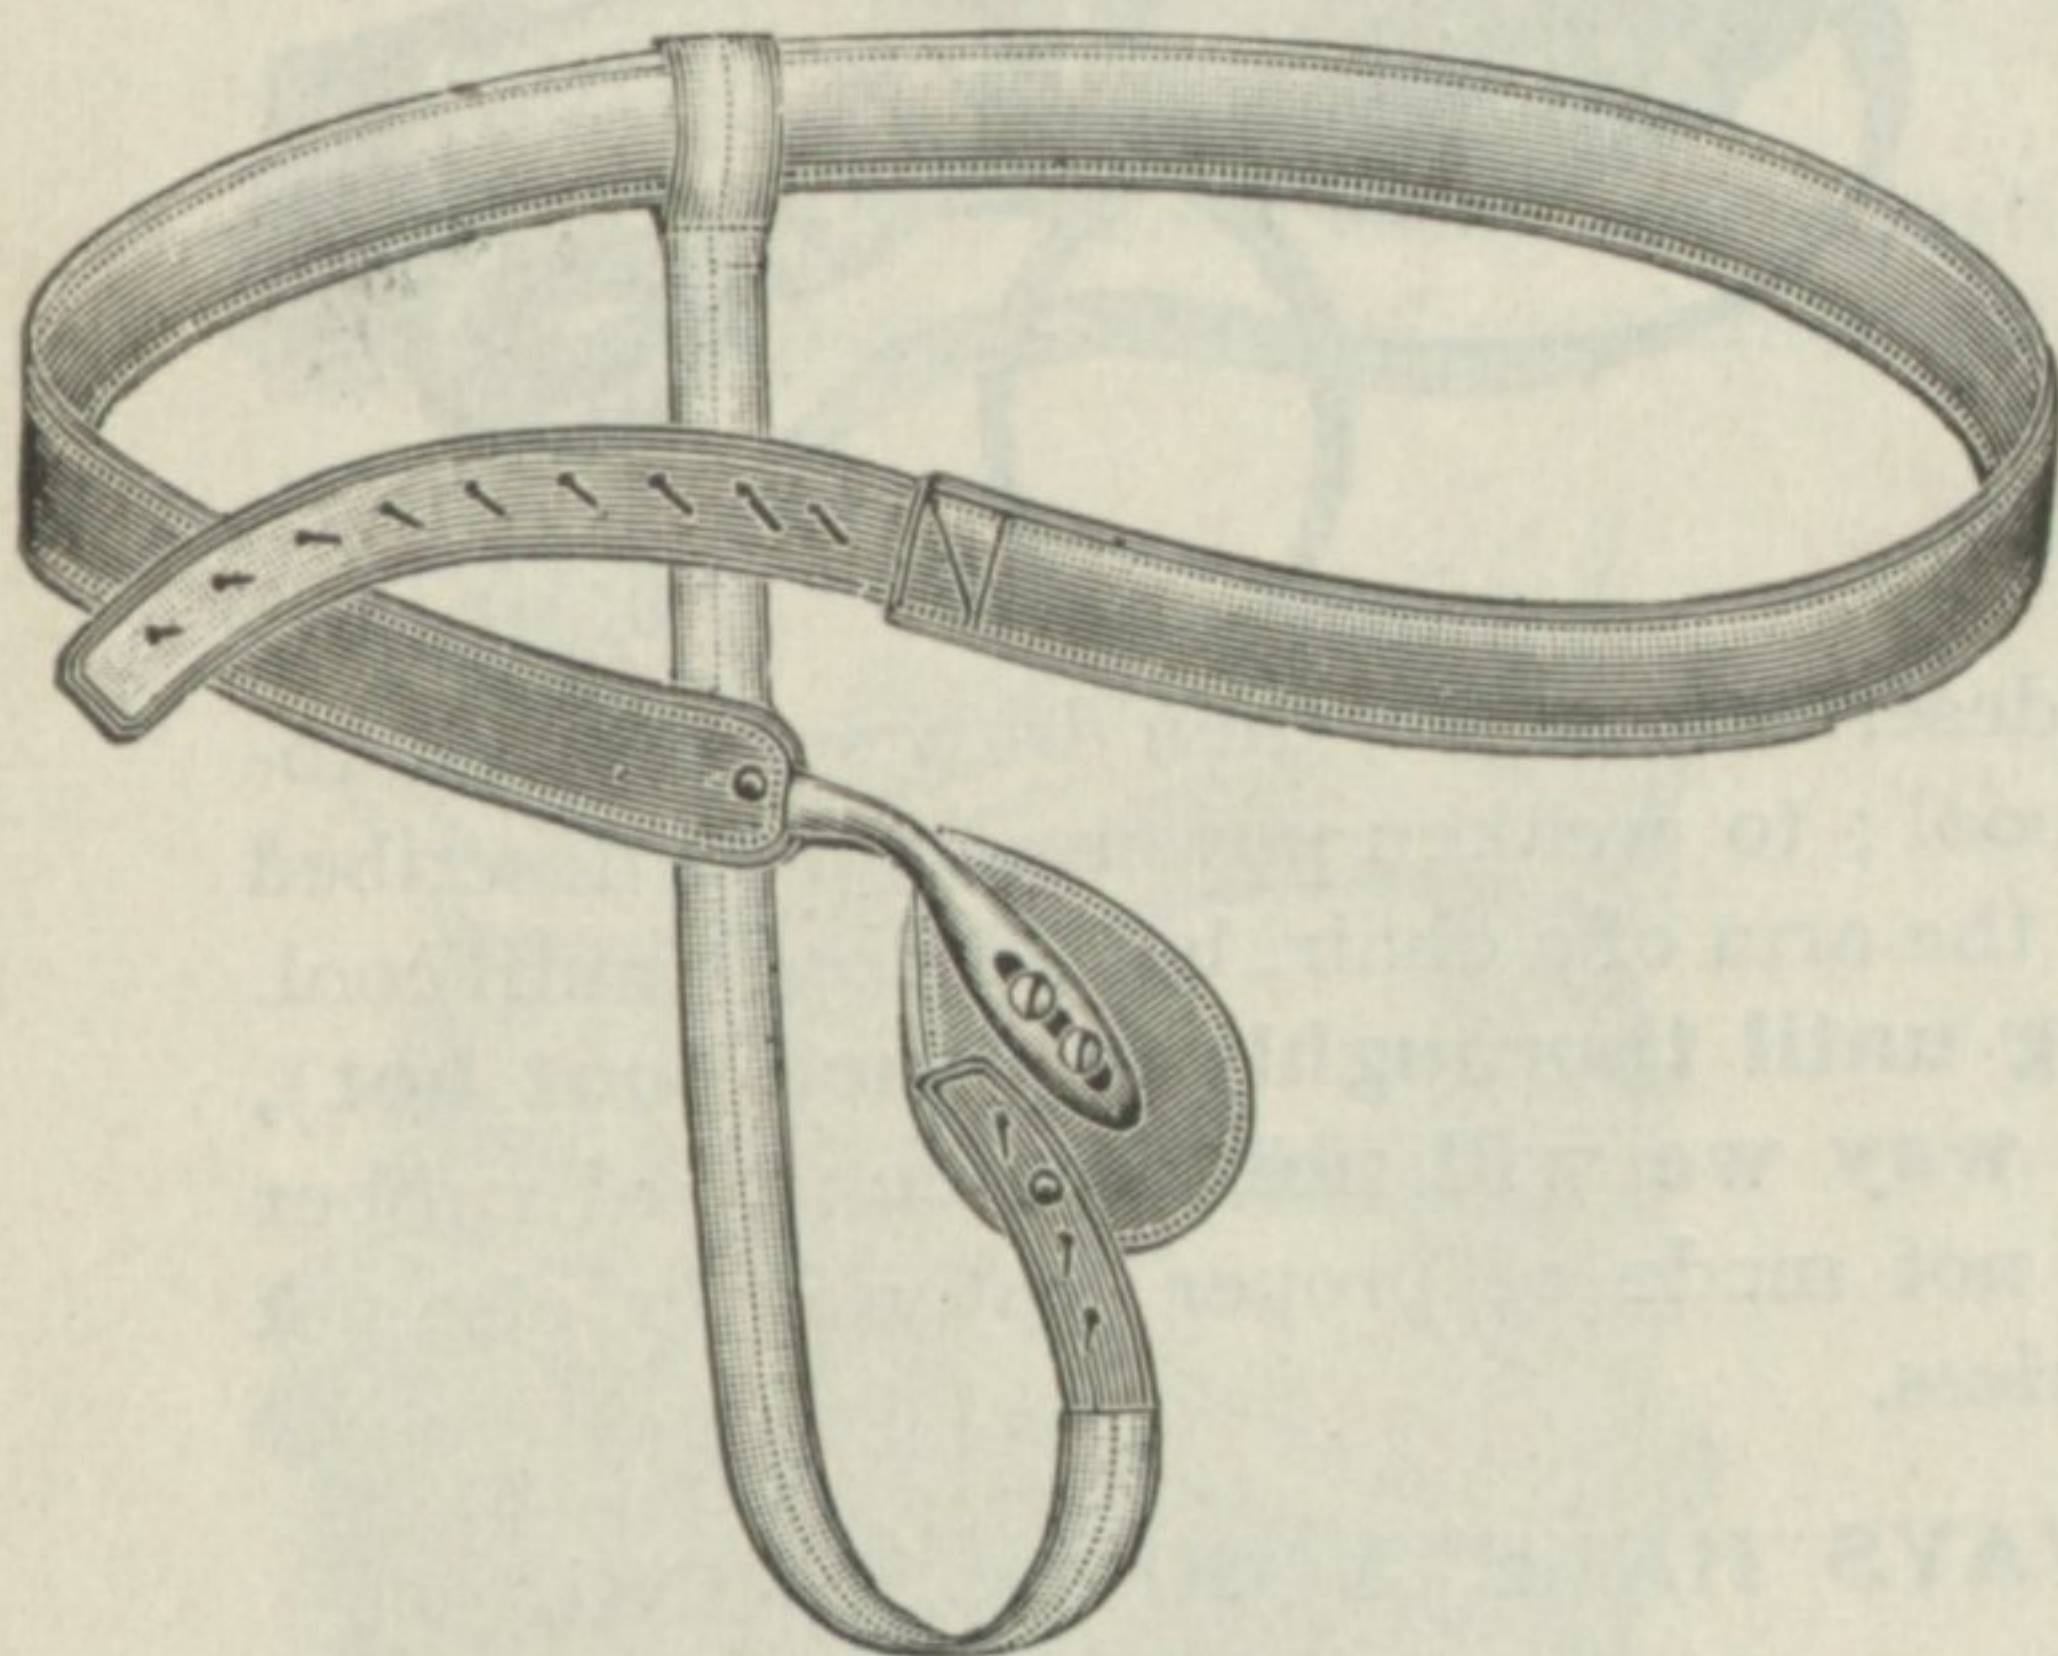

During our extensive experience of over half a century in the fitting of trusses we have applied almost every style of truss.

This accumulated experience has enabled us to closely study the retentive power of the various patterns, and upon carefully noting the defects and good features of them have constructed the **Wocher Standard Truss** (combining the best qualities of the many styles), which we can recommend to the afflicted as the **most practical, best fitting and most comfortable appliance** for the support of hernia.

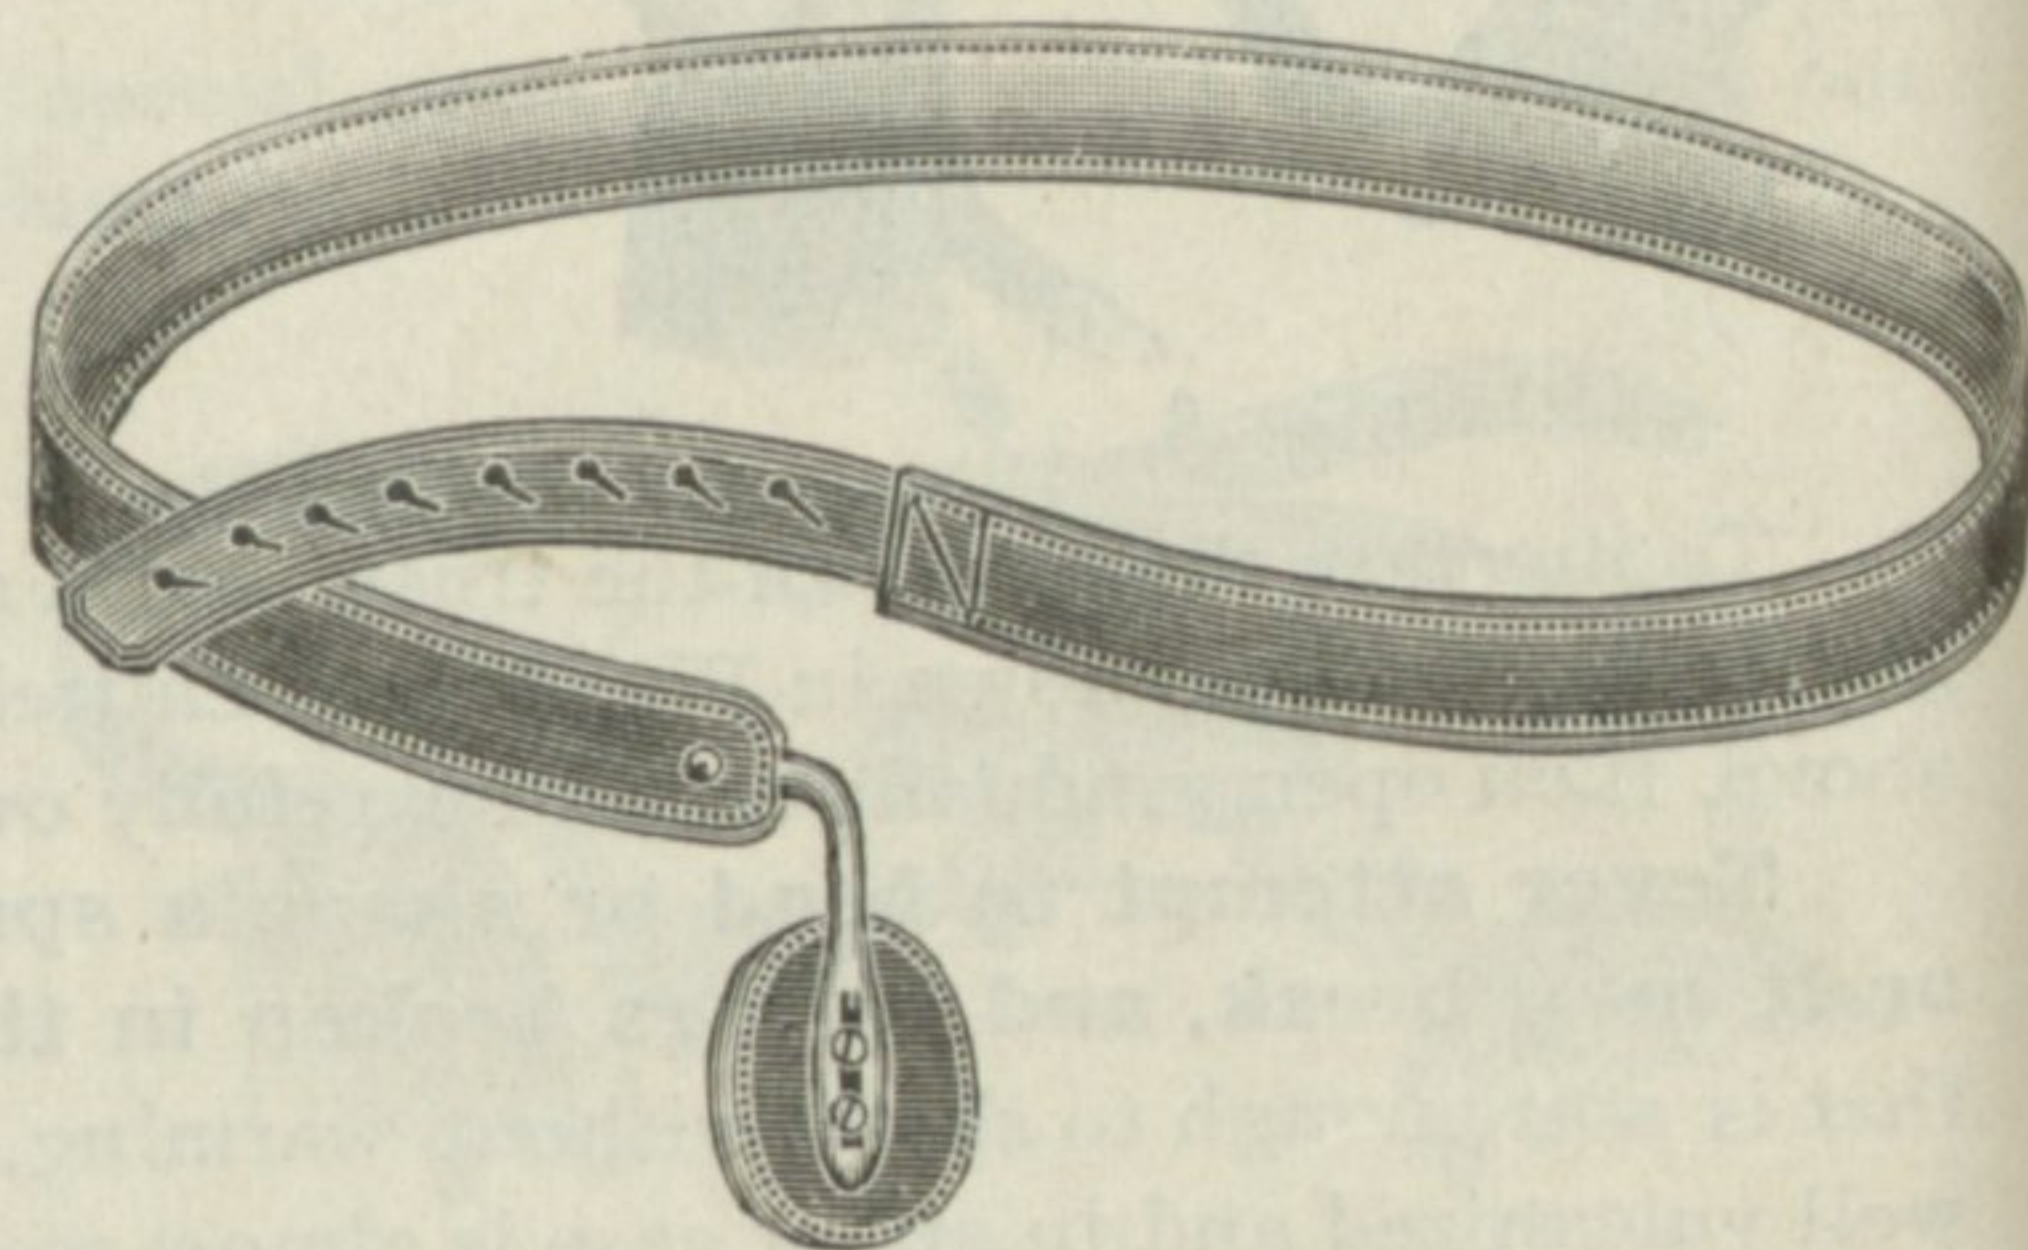

We have applied same with great success in cases where others have utterly failed to hold the hernia, and the many letters of gratitude received from patients that have been perfectly cured certainly show its great superiority.

The material we use in these trusses is of the very best, the springs being made of superior English steel, carefully tempered, and coated with enamel to prevent rusting. The peculiar curves given the springs cause the trusses, when properly applied, to fit the body perfectly, and on account of their soft cushioning are very comfortable and durable. The pads are of our own design and hair filled, not being found on any other make of truss.

These pads are attached to the spring by a malleable steel neck or shank by which the position of the pad can be regulated and easily adjusted to have the correct bearing.

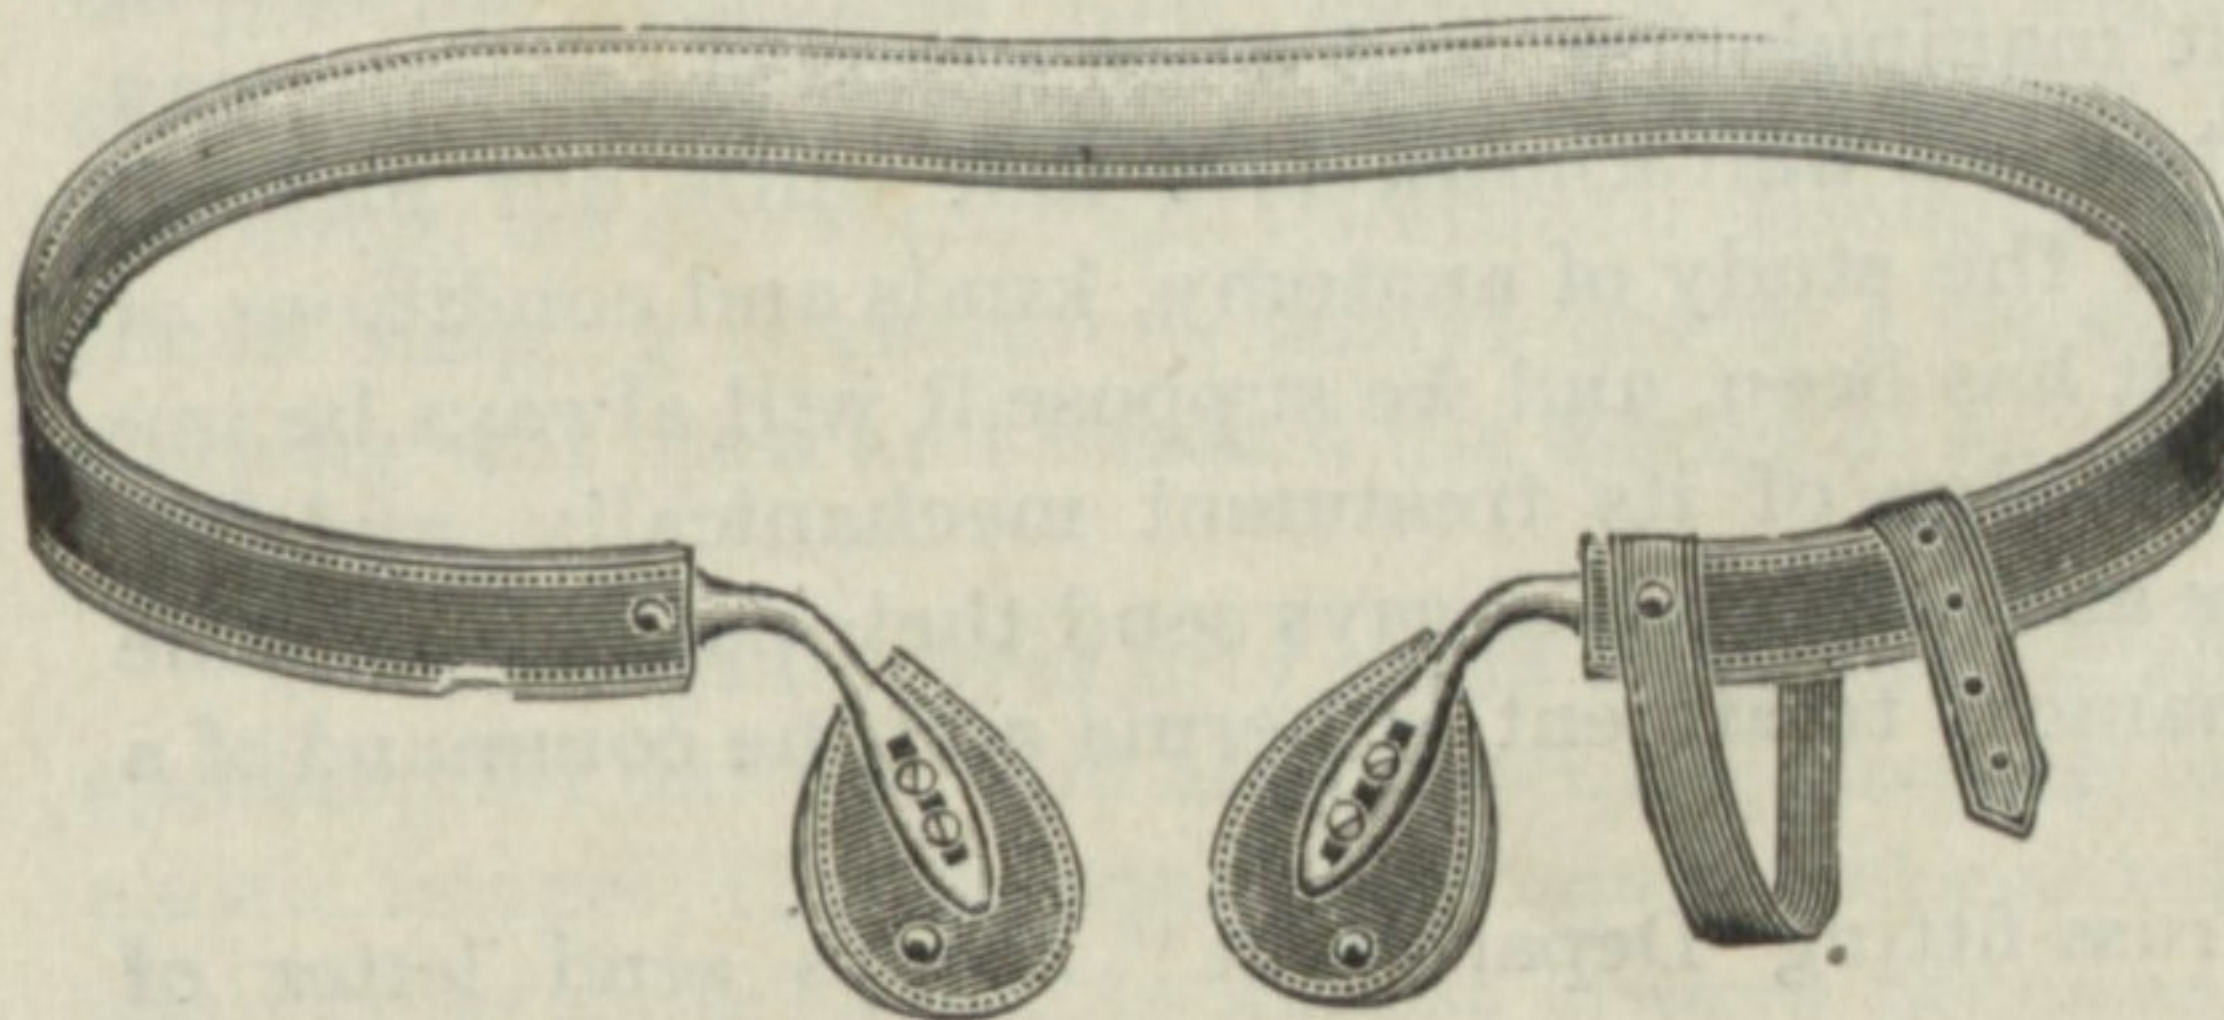

WOCHER'S SINGLE STANDARD TRUSS. For Inguinal Hernia,  
Furnished With or Without Perineal Strap.

WOCHER'S FEMORAL TRUSS.  
Furnished With or Without Perineal Strap.
