

ADJUSTABLE ROLLING CHAIR.

269

The above illustrated invalid chair is by far the best selling chair on the market, and can be used for more cases than any one chair that we have. It is constructed thoroughly, and affords great comfort for the patient. It can be adjusted from an upright position to an extreme reclining position, which are obtained by a ratchet at joint of the seat and back. The chair is made of light, but very durable material, which feature renders it very easily operated by the patient. Its superiority to the many other makes now on the market can be noted in its perfect fit to the human body, shape, curves and proportions.

The chair is made in two widths, to go through wide and narrow doors.
