

ELECTRICAL BATTERIES.

The Professional Galvanic Batteries with Staple Dry Cells.

The Professional Dry-Cell Galvanic Batteries are constructed with the view of meeting a long-felt want for a good and cheap Galvanic Battery. Heretofore the Dry-Cell types were so expensive that physicians hesitated to recommend same to their patients.

Acid types, while good, are a continual vexation, requiring recharging and repairing continually and the annoyance and damage caused by leakage have created a demand for a good Dry-Cell Battery.

The Professional Dry-Cell Type are of simple construction, in highly polished wood case having 12, 15 or 18 cells of ordinary staple type, which can be replaced by anyone without electrical experience.

The cost of New Dry Cells is less than the cost of acid solution and zinc renewal to operate the old style zinc-carbon battery for the same length of life.

The battery is furnished with a Cell Selector, Sponge Electrodes and Cords.

12-Cell Professional Battery.....	\$12 00
15-Cell Professional Battery.....	13 50
18-Cell Professional Battery.....	15 00
Cost of renewing Cells, each	35

The 12-Cell Battery is recommended for Electrolysis or Head and Eye Work, while the 18-Cell for general galvanism. The 18-Cell is about equal in current strength with a 12-cell acid type.
