

ASEPTIC FURNITURE.

THE HALL-BALDWIN GENERAL OPERATING TABLE.

The latest, most practical and strongest table made. Has no ratchets, cogs or mechanism to become disarranged or out of order.

This table combines the most important features embodied in the principal tables now on the market. It is applicable for abdominal and general surgery, rectal and lithotomy work.

One of the most important new features of the table consists in the design or shape of the top surface. The head and shoulder end of the table is raised slightly and the center slightly depressed, thereby the abdominal muscles are relaxed during the operation, avoiding tearing apart or flapping, a most important feature not attainable in any other table.

It has also an improved extension drop, which by simple adjustment controlled on either side of table can be brought from the horizontal to the Trendelenberg or bent-knee position and *vice versa* while the patient is on the table, and automatically catching in either position.

On one end two heavy glass plates are set slightly apart and at an inclination toward the center, as on the Tuholski table, which serve a double purpose.

1st. The patient has no direct pressure on the spine as in flat-top tables.

2nd. The space between the plates serves as a drain, as the objection has been made heretofore that the back of the patient becomes wet during the operation in the Trendelenberg position, which is now overcome on this table.

A larger drain is also placed across the center of the table for carrying off the bulk of water, etc., during irrigation of abdominal cavity.

The table is supplied with removable upright leg holders as well as gynæcological stirrups, thus making the most practical, yet simple and convenient operating table.

The table has a full length of 67 inches, is 33 inches high and 20½ inches wide.

Casters are supplied to the operating end, while rubber tips are placed on head end of table.

Price, with a pair of both sets of stirrups as **shown on Fig. 3** \$75 00
 Price, with a pair of both sets of stirrups and adjustable shoulder braces **shown on cut below** 85 00

Price of plain flat iron-top Baldwin Table, with improved drop catches as shown on cut, with one set of Leg Holders 50 00
