

ASEPTIC FURNITURE.

The No. 4 Hall-Baldwin All Metal Operating Table.

To meet the demands for an all-metal plain strong table of the original popular Hall-Baldwin pattern shown on the preceding pages, and one which is somewhat less in price, we have constructed the following design which retains the original features and simplicity, but has a white enameled metal top instead of glass.

It consists of a wrought iron frame supporting *the Hall celebrated extension drop, which has made our tables so popular.* The simple Hall adjustment controlled on either side of the table can be brought from the horizontal to Trendelenberg or bent knee position with greatest ease from either side of the table, automatically catching in either position.

The rounded edges which support the popliteal space when in bent position, is also a marked improvement on our tables.

All chains and catches on all other tables are dispensed with, making our tables less liable to get out of order.

The equipment is somewhat plainer than the original, yet strong and durable and far superior to the many very light, cheap and shaky outfits now on the market.

We recommend as our best table the original as illustrated on the preceding page, which is used by Drs. Baldwin, Hall, Reed, McMurtry, Zinke, Bonifield and hundreds of others. It is now furnished with white glass top slabs, but where a somewhat cheaper design is desired, the pattern as illustrated on this page has been found very satisfactory; in fact, better than many so-called Baldwin Tables of various makes.

Price, with a pair of Leg Holders.\$50 00

No. 4 Hall-Baldwin All Metal Operating Table.

All instruments designated with a * are illustrated.
