

THE ARNOLD STERILIZER AND PASTEURIZER.

Physicians are quite unanimous in recommending cow's milk as the best substitute for mothers' milk, but insist that it shall be sterilized. Some say at high temperature (212° F.), and others at low temperature (167° F.).

The Arnold Steam Sterilizer is a cheap, simple and reliable apparatus that can be used for either **High or Low Temperature Sterilizing**.

Experiments in the principal laboratories of the country have proved that an unvarying temperature of 212° F. is maintained in this apparatus, and that milk treated therein for one hour is absolutely *free from all germs of disease*, and will keep indefinitely without ice.

By simply removing the Condenser or Hood, the Sterilizer is converted into a Pasteurizer, maintaining a temperature of 160° F. to 170° F., which practically destroys all germs and does not impair the nutritive properties of the milk.

PRICE LIST—FAMILY SIZES.

No. 1. Heavy tin, copper bottom, with rack cleaning brush and 7 bottles.....	\$3 00
No. 2. " " " " " " " 8 "	3 50
Extra bottles, per dozen.....	60
Croup attachments with 10-inch tubes.....	30
