

NURSING SUPPLIES.

The "Materna" (Estraus) for the Home Modification of Milk,

As suggested by Dr. Sidney V. Haas, enables the physician to successfully cope with the ever-perplexing problem of Artificial Infant Feeding. It is devised upon the now-accepted idea that cow's milk in a modified form is the most rational substitute for mother's milk. Heretofore the expense of milk modified in accordance with a prescription and the difficulty of having it properly modified at home have prevented many physicians from recommending its use.

ROCHESTER FOOD WARMERS.

(AND COOLERS.)

These Warmers are made of copper, and, unlike rubber, which is very perishable, will last a life-time. Besides, they are much cheaper than rubber warmers. They are covered with a removable felt cosy which makes them complete in themselves. No blanket is required to keep them warm. Boiling water is poured into the jacket through the screw-cap opening. The bottles containing food are placed in the tubes and do not come in direct contact with water.

They can be used for any food, but are especially adapted for Sterilized milk. They hold three bottles, and will keep the food warm enough for feeding, at least eight hours. They rob bottle feeding of its worst drawbacks; **parents or nurses who use them are not obliged to get up in the night to heat food for the baby**, and as there is no delay, baby will not become restless by having to wait for its food after waking.

Milk or other food can be kept cool by substituting finely crushed ice or ice water instead of hot water.

Price, Polished Copper with Felt Cosy, \$2.00.

Bottles extra (three) 25 cents.

Sterilizing or Pasteurizing Thermometers, each\$0 75

Bath Thermometers, 8-inch, \$0.25; 9-inch, \$0.35; 12-inch, \$0.60

For Sterilizers see Index.
