R 130* The Success Ladies' Syringe.

The curative value of hot water vaginal "injections," the importance of "posture," of the "hot douche," and of "continuous irrigation" in treatment of pelvic disorders, have for a long time been appreciated by the medical profession, and need no mention but to say that the "SUCCESS" Syringe has been constructed to meet every indication and at the lowest cost.

R 130

ADVANTAGES OF THIS SYRINGE ARE

1st. It is made of such shape that it is very easily introduced and fits the parts anatomically when in position.

2nd. Injections may be used 20 to 30 degrees hotter with this syringe than with others, as the "air space" prevents the cone from getting hot, thus protecting the more sensitive external parts.

3rd. When the cone is in position the inflow tube may be pushed forward and beyond the cervix, which, together with the positions of the patient, will thoroughly distend the vagina and wash out the bottoms of its folds.

The syringe tip is made of hard rubber and can be easily taken apart and cleaned.
