

THE IMPROVED DOUBLE-VALVE, "CLEANABLE" COMBINATION SPRAYING AND NEBULIZING APPARATUS.

Handsome in Appearance.

Easy to Clean.

Low in Price.

No backing up of nebula from one
bottle to another as in
other patterns.

No. 4D. Combination Apparatus.

This apparatus is similar in design to our popular No. 1D. Combination Apparatus described on preceding page, excepting that it has two valves on each bottle—one for the air inlet, and one on the nebula outlet, avoiding thereby the passing or backing up of the nebula to bottles not in use, a most objectionable point with other makes or styles.

This pattern can also be cleaned very easily by unscrewing the two caps on each end of the front tube, which is not feasible with the circular styles.

The Compressed Air Spraying Tubes can be directly connected to this form of apparatus, combining both spraying and nebulizing in one.

An Air Gauge is supplied and all parts beautifully finished and plated, and will enhance the appearance of any office.

The outfit is furnished with five bottles; three crystal colored, and one each amber and blue for holding such remedies as are affected by light.

No. 4D. Nebulizing Apparatus, ready to attach to any Spray Apparatus, with Tubing and three Nose and Mouthpieces.....\$32.50

The above price does not include the silk-covered tubing and spray tubes which are furnished with the Compressed Air Cylinder.
