

COMBINATION COMPRESSED AIR SPRAYING AND NEBULIZING APPARATUS.

For treating all diseases of the Respiratory Organs, Middle Ear, Eyes, or for the Skin by means of the spray of the atomizing attachment and with nebulized remedies. In throat or nasal affections it is very essential that the tissues be first thoroughly cleansed with an aqueous aseptic solution, which can only be attained by means of an atomizer and then a remedial combination be applied by means of the nebula. This has been recognized as the most effective method in handling acute or chronic cases.

This apparatus can be used for both purposes in connection with an Air Cylinder.

It consists of a horizontal standard, highly finished and nickel-plated with five nebulizing bottles *A*, having hard rubber tubes, the air being controlled by the valves *B*.

Single preparations can be used, or any or all can be used simultaneously to obtain any combination of liquids, which cannot be obtained by a single instrument, especially when chemicals are used that cannot be combined in liquid form, but will combine in the nebula. Valve *K* controls the air from the Air Cylinder; and the gauge *D* shows the pressure used in politization being controlled by the lever valve *E*. The gauge also serves to register the pressure of the Air Cylinder as well as enhancing the general appearance of the apparatus.

For cleaning the apparatus the hard rubber tubes in the bottles are unscrewed and the nuts *G* are removed, when a swab can be run through the tube through which the nebula passes; this feature is not feasible in any other apparatus.

If desired, the Spray Attachment can be added to Valve *C*, as shown in the illustration.

PRICES.

- | | |
|--|---------|
| No. 1D. Combination Spraying and Nebulizing Apparatus with 5 bottles secured to a carved oak base..... | \$27 50 |
| No. 2D. The same, with Silk Tubing Connections, Automatic Shut-off and set of three Spray Tubes, as shown in the cut..... | 32 50 |
| No. 3D. The same as No. 1D, with the addition of our No. 1 Compressed Air Cylinder Outfit, including Pump, Spray Tubes, etc..... | 52 50 |

The above apparatus is also made with a cabinet base, described on the preceding pages. This style of apparatus is far superior to the circular pattern, as it is more easily cleaned and is not liable to leak or get out of working order.
