

COMPRESSED AIR APPARATUS. HYDRAULIC AIR COMPRESSORS.

No. 1B. The Champion Hydraulic Pump. This apparatus automatically fills the reservoir by water pressure, whereby a continual steady air pressure is maintained without any attention on the part of the operator. These pumps have been in constant use by physicians for several years and are giving excellent satisfaction. Price.....\$20 00

No. 1B. The Champion.

No. 2B. The Monitor Hydraulic Pump is a low pressure pump and is recommended where the water pressure is below 18 pounds pressure. Price.....\$20 00

No. 2B. The Monitor.

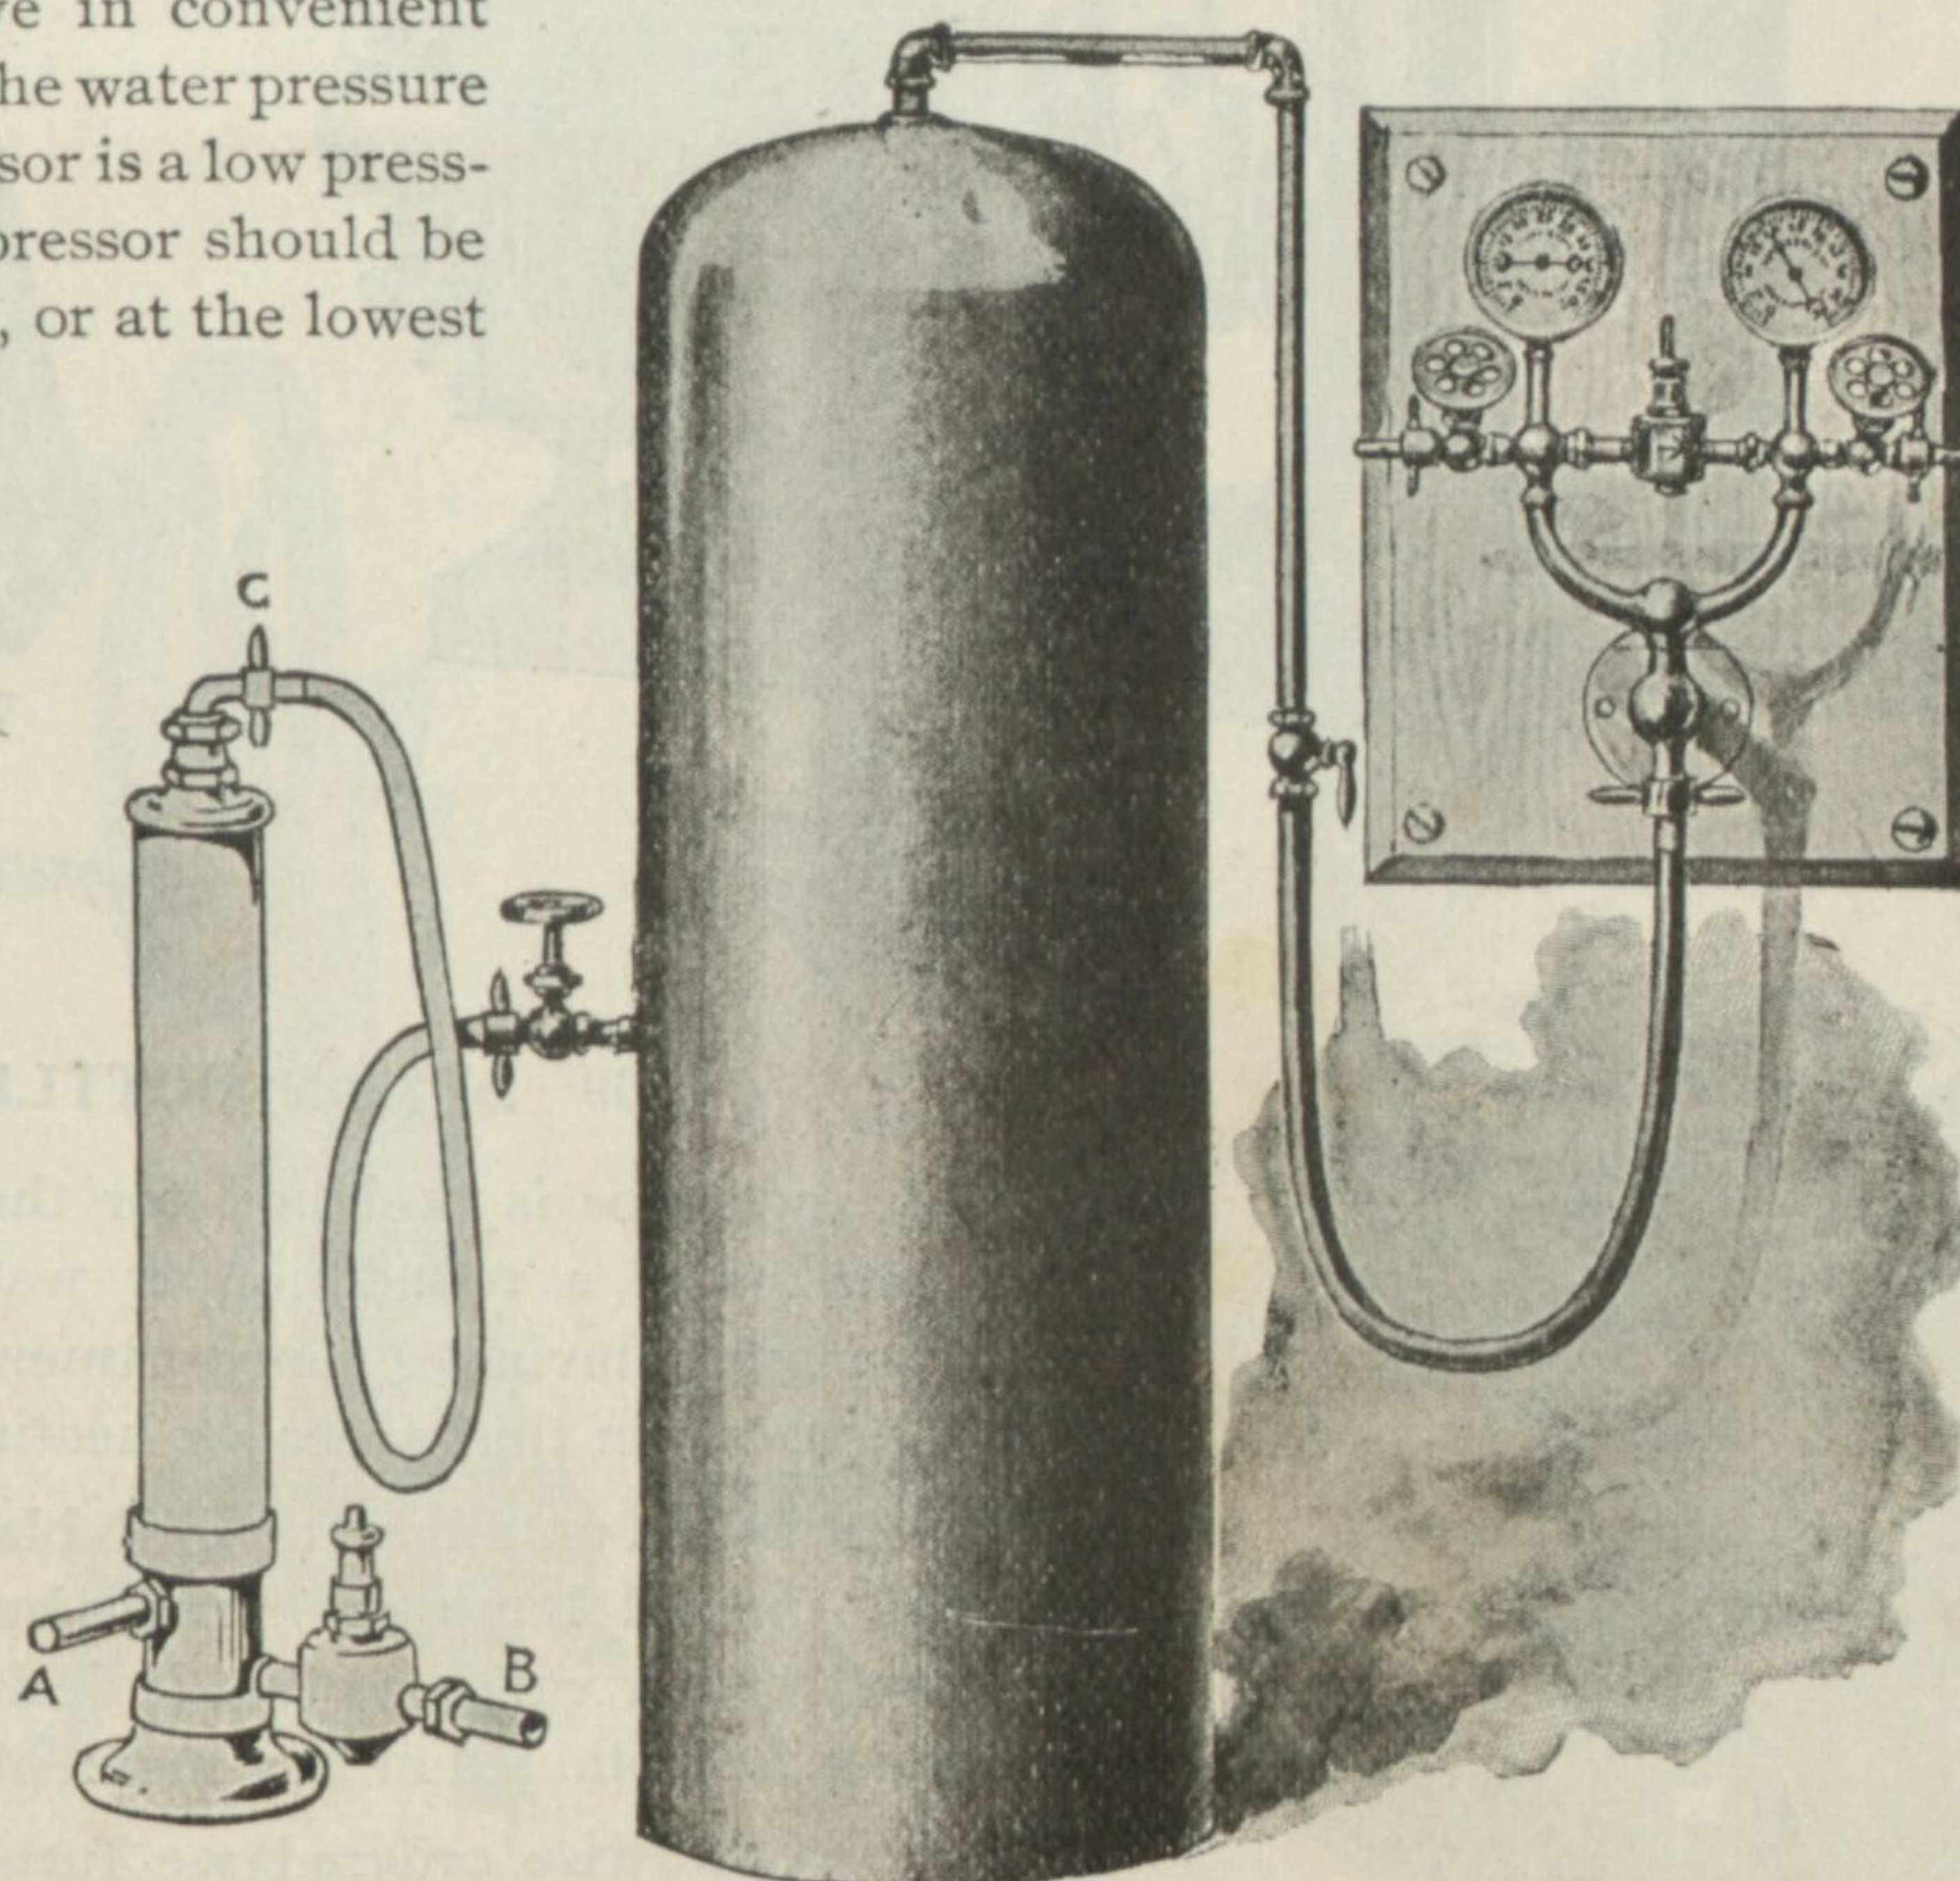

No. 3B. Double Hydraulic Air Compressor. Price..... 35 00
Gives air pressure of twice the amount of the pressure of the water system to which it is attached.

No. 4B. Little Wonder Hydraulic Pump.
Especially adapted for muddy water\$20 00

No. 6. Hydraulic Pump Outfit. The cut shows the Champion Hydraulic Air Compressor connected to our Seamless Steel Air Receiver. These may be placed in the office or basement and the wall valve in convenient position for the operator. If the water pressure which is to operate Compressor is a low pressure water service, the Compressor should be connected in the basement, or at the lowest possible level. It is not necessary to place Compressor and Air Reservoir in the same room. When the various parts are placed some distance from each other then iron or block-tin pipe is usually used to connect same.

No. 6 Outfit, as shown
in cut\$50 00

No. 6A Outfit, same as
the above, but is
supplied with a
single wall valve
instead of the one
shown.....\$37 50

No. 6 Outfit.
