

MAX WOCHER & SON, CINCINNATI, O.

Illustrating Aseptic Burners.

ASEPTIC THERMO-CAUTERY BURNERS.

These burners are made with an inner detachable tube of platinum, (through which the vapor from the benzine reservoir passes to the heated point) and an outer platinum point which screws on to the shank as shown in above illustration. The great advantage of these cautery-burners over the old style (which were not separable) is that they can be heated more quickly; are of greater durability and can be easily taken apart for repairing in case they become damaged.

LONG SHANK.
