CONSIDER THE ADVANTAGES
OF
STEEL ROOFING

AS HEREIN SET FORTH

BY

W. G. HYNDMAN & CO.,
Manufacturers of
IRON & STEEL ROOFING,
CINCINNATI, OHIO.

IRON ROOFING.

THIS firm has been manufacturing Iron Roofing for fourteen years, and in all that time has produced Iron Roofing of the most uniformly good quality; this has been accomplished by the use of the best material and the most careful selection of the sheets, rejecting all imperfect doubtful sheets.

From the peculiar manner in which Sheet Iron is produced from pig or scrap iron, there is great liability of fireclay and cinder being rolled into the sheets and creating imperfections. That our roofing has been so uniformly good is due to our careful examination of sheets and rejection of doubtful material.

Nevertheless some imperfections may exist in the sheets, which time and wear on the roof can only bring out.

STEEL ROOFING.

IN 1885 we commenced to make Steel Roofing. In the six years we have been using it we have found practically no imperfect sheets, and the wear of many steel roofs have failed to develop any imperfections. We therefore recommend it highly in preference to Iron, although we have many Iron Roofs, now in use fourteen years, and which are likely to last many years more.

The advantages of Steel over Iron for Roofing may be briefly summarized as follows:

A purer metal.

Sheets practically free from imperfections.

Sheets which can be doubly seamed if necessary.

To make a good roof you must have good material. Steel has proved itself entirely reliable, therefore we recommend it to you.

Yours truly,

W. G. HYNDMAN & CO.
