involved in the manufacture of artificial ice. Ammonia gas is first compressed into a liquid and then liber ated into a network of tubes surrounding large sheet from boxes filled with distilled water. The liquid ammonia, set free at one end of the pipe system, begins at once to evaporate, and by the time it has scampered through the long from tubes it has become gas. As we have learned, to change a liquid to a gus requires heat. This heat is taken from the from piping, an excellent conductor, which in turn robs the water of its heat, thus freezing it.

AUCTION SALE

Valuable Business Lots GREENVILLE, N. CAR.

Mr. B. E. Parham has placed in my hands for sale his splendid

Warehouse Property

All of this property except the warehouse site will be divided into lots and sold at public auction on the premises on

TUESDAY, MAY 24, 1910

Beginning at 11 O'clock, A. M.

This property is situated between the Atlantic Coast Line and Norfolk Southern depots, and is in the business centre of that part of Greenville known as Tobacco Town. It consists of 6 lots fronting on Dickinson avenue which has concrete sidewalks and paved street; 3 lots on Ninth street which is a sand clay street and the main thoroughfare of Tobacco Town; 6 lots fronting on Tenth street which is the broadest street in Greenville and leads direct to the Atlantic Coast Line depot. A railroad siding can be ϵx tended across Tenth street into this property which makes it very valuable for heavy traffic.

To give an idea of the demand for places of business in this locality, Higgs Brothers have recently built a brick block containing five handsome stores just in front of this property and they were occupied as soon as finished, and there is now a demand for more.

This is a rare opportunity to buy a business site, for this property is absolutely a safe and paying investment.

Remember the date of sale, Tuesday, May 24, 1910.
