Stereoscopic Studies

of

ANATOMY

Prepared under authority of the University of Edinburgh

by

Professor D. J. Cunningham.

F.R.S., M.D. (Edin. et Dubl.), D.S.C. (Glasg. et St. And.), D.C.L. (Oxon.)

Edited by

David Waterston

M.A., M.D., F.R.C.S.E., F.R.S.E., Lecturer and Senior Demonstrator of Anatomy,
University of Edinburgh

Professor M. H. Cryer

M.D., D.D.S., Professor of Oral Surgery, University of Penn.; Visiting Surgeon, Phila. General Hospital, etc.

Frederick E. Neres

M.D., formerly Instructor in Otology and Operative Otology, New York Post Graduate Medical School and Hospital; Chief of Clinic, Manhattan Eye, Ear, Nose and Throat Hospital, New York City

NEW REVISED EDITION

Section II

NEW YORK

Imperial Publishing Company

Stereoscopic Studies of Anatomy, Section II

Table of Contents

Central Nervous System

Continued.

BRAIN

- No. 1.—The roof and the floor of the horns of lateral ventricle from below.
- No. 2.—The mesial fillet in the medulla and pons.
- No. 3.—Cerebellar peduncles and roots of fifth nerve.

 No. 4.—The corpus dentatum of the cerebellum, the cerebellar peduncles, and the lateral fillet.

HEAD AND NECK

Surface Anatomy

No. 5.—Front and side of neck.

Back of Neck

- No. 6.—Muscles, &c., of back of neck.
- No. 7.—Sub-occipital triangle.

Posterior Triangle

No. 8.—A portion of the clavicular head of the sterno-mastoid muscle turned aside to expose the triangle more completely.

Side of Neck

No. 9.—Superficial vessels and nerves.

Spinal Canai

- No. 10.— Dura mater.
- No. 11.—Arachnoid and cranial sinuses.
- No. 12.— Brain stem and cranial nerves in situ.
- No. 13.—Structures piercing the dura mater.

Front of Neck

- No. 14.— The anterior triangle exposed.
- No. 15.— The inner part of the right clavicle removed, and also the lower part of the right sterno-mastoid muscle.
- No. 16.— In addition to the previous dissection, the great veins and the depressor muscles of the hyoid of the right side have been removed.
- No. 17.— A deep dissection of the root of the neck.

Parotid Region

- No. 18.—A superficial dissection of the parotid gland and the structures related to it, and of the side of the face and the upper part of the neck.
- No. 19.— The parotid gland removed from the bed in which it lay, in order to show its deep relations.

Submaxillary Region

No. 20.— A portion of the horizontal ramus of the lower jaw has been removed.

Pterygo-Maxillary Region

- No. 21.— The zygomatic arch removed, with the masseter muscle and also the coronoid process of the lower jaw and the lower part of the temporal muscle. The upper half of the ascending ramus of the jaw also removed.
- No. 22.— The remaining portion of the lower jaw shown in the former view removed, and the internal pterygoid muscle cut short.

Sagittal Section of the Head

No. 23.— The section is slightly to the right of the mesial plane in front.

Nose and Pharynx

- No. 24.— Sagittal section of the nose, mouth and pharynx.
- No. 25.— A section similar to the former after removal of the turbinated bones.

Pharynx

- No. 26.— Posterior wall of the pharynx and adjacent structures viewed from behind.
- No. 27.— The cavity of the pharynx exposed by the removal of the posterior wall.
- No. 28.— Lateral relations of the right side of the pharynx viewed from behind.

Larynx

- No. 29.—Larynx and thyroid gland viewed from the front.
- No. 30.—A, the larynx viewed from behind, and B, from the side after removal of the ala of the thyroid cartilage.
- No. 31.—Viewed from behind. A, the interarytenoid fold and adjacent parts of the arytenoid cartilages removed. B, the anterior half of a coronal section through the larynx, &c.
