## VERTICAL TRANSVERSE BILATERAL SECTION No. 5

Section-IX No.5

IMPERIAL STEREOSCOPIC ANATOMY OF THE HEAD AND NECK

Anterior view showing the posterior region of the nasal fossae and the maxillary sinuses. The right sinus is small, similar to that in No. 4. An instrument passed vertically through the axis of the alveolar process would perforate the nasal fossa instead of the floor of the antrum. The floor of the maxillary sinus extends downward until it is on a level with the uvula.

The figures indicate—

1—Superior Turbinated Bone
2—Ethmoidal Cells
3—Middle Turbinated Bone
4—Deflected Nasal Septum
5—Maxillary Sinus
6—Inferior Turbinated Bone
