## DEVELOPMENT OF THE EXTERNAL AUDITORY CANAL No. 3

This Stereogram is made from the under-surface of a child's skull about four months old. The condyloid processes and the glenoid fossa are better developed than in stereogram No. 1, card 83, or No. 2, card 84, the auditory ring is better developed. The external tympanic membrane being removed from the left car, the ear bones are plainly seen. The handle of the malleus, which originally was part of the same Cartilage-Meckel's-from which the mand be was formed is well shown. It also demonstrates the close relation of the mandible to the developing external auditory plate and canal.

## The figures indicate—

- 1-Maxilla
- 2—Mandible
- 3-Malar Bone
- 4—Greater Wing of Sphenoid Bone
- 5—Zygoma
- 6—Temporo Mandibular Articulation
- 7—Squamous Portion of Temporal Bone
- 8-Auditory Ring
- 9—Ear Ossicles
- 10-Mastoid Process
- 11-Jugular Process of Occipital Bone
- 12—Fontanelle
- 13-Parietal Bone
- 14—Ascending Portion of Occipital Bone
