## IMPERIAL STEREOSCOPIC ANATOMY OF THE HEAD AND NECK

## Section -IX -- No. 30

## FRONTAL SINUS No. 7

The anterior wall of the frontal sinus is removed, exposing two frontal sinuses of unequal size and shape, with septum nearly in the median line but somewhat curved in its formation. On the right side there is apparently an enlarged ethmoidal cell pushed or "blown up" into the frontal sinus. This cell or pocket has its independent outlet into the hiatus semilunaris. In the left frontal sinus there is a large balloon-shaped cell partly divided by an incomplete septum; it has two outlets into the region of the anterior ethmoidal cells.

1—Septum of Sinuses
2—Frontal Sinus
3—Balloon Shaped Cell (Ethmoidal)
4—Outlet of Frontal Sinus
