FRONTAL SINUS No. 9

The anterior walls of the frontal bone have been removed, showing two large frontal sinuses. From the appearance of the picture there are three sinuses, but the septum on the right side is incomplete, making but one sinus on that side; consequently the right sinus is very large and extends from the right angular process transversely to the left of the median line, measuring 65 m.m., over all. Its depth from the top to the outlet is 45 m.m., and it extends well back over the orbit 44 m.m. The left sinus extends outward to the external angular process and backward to about one-half the distance of that on the right side.

The figures indicate—

- 1-Median Frontal Sinus
- 2—Right Lateral Frontal Sinus
- 3—Incomplete Septum
- 4—Left Lateral Frontal Sinus
- 5-Sphenoidal Fissure
- 6—Spheno-Maxillary Fissure
- 7—Dento-Alveolar Abscess
