FRONTAL SINUS No. 12

An anterior view of two very large trontal simuses, which extend backward over the orbit, where they are divided by several incomplete septa. They also extend downward as indicated by the wires and communicate directly with the maxillary sinuses. The right and left each measure horizontally 50 m.m., and their depth is 40 m.m. (See vertical transverse bilateral sections Nos. 9 and 10—Cards Nos. 71 and 72.)

- 1—Frontal Sinus with Septa
- 2—{ Wire Fassing from Frontal Sinus into Maxillary Sinus
