IMPERIAL STEREOSCOPIC ANATOMY OF THE HEAD AND NECK

ANTRAL TEGMEN ABNORMALLY LOW AND BULBOUS KNEE OF SINUS

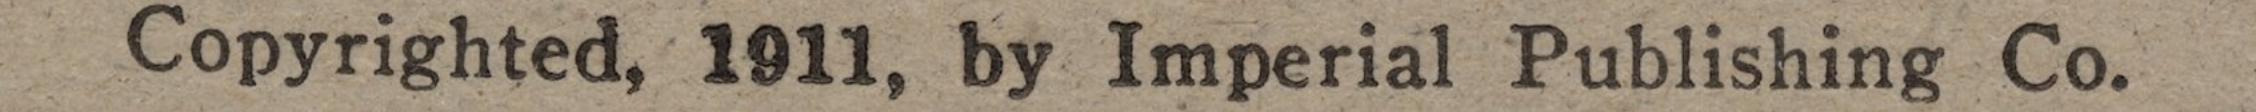

This specimen graphically illustrates two most important structures encountered while ablating the mastoid cells, if located abnormally as shown in this specimen. The antral tegmen has been removed showing the dura beneath. The knee of the lateral sinus is seen centrally placed; also the posterior or lateral turn of the sinus as it passes back to the torcular herophili.

The figures indicate-

1—Antral Tegmen (Dura)
2—Mastoid Antrum (Floor)
3—Torcular Bend of Sinus
4—Posterior Auditory Canal Wall
5—Narrow Space Between Knee of Sinus and Auditory Canal
6—Ascending Sinus
