Film explores undersea world

"Four Fathom World" will be shown in Wright Auditorium as part of the Travel Adventure series at 8:15 p.m. on Tuesday, Jan. 26.

The film, which deals with the reaction of undersea creatures to human beings, will be narrated by its producer, Harry Pederson.

The film includes scenes of

various aspects of a coral reef and the beauty of its formations, together with close-ups of the flower-like animals that build and live on them. Undersea citizens go 1 quietly about their business the queen angel, the rainbow parrot, the French angel, and the calico trunk fish wheeling about like a helicopter. A large ray sails off over the reef

trailing a plume of coral dust.

Squids appear out of the sea

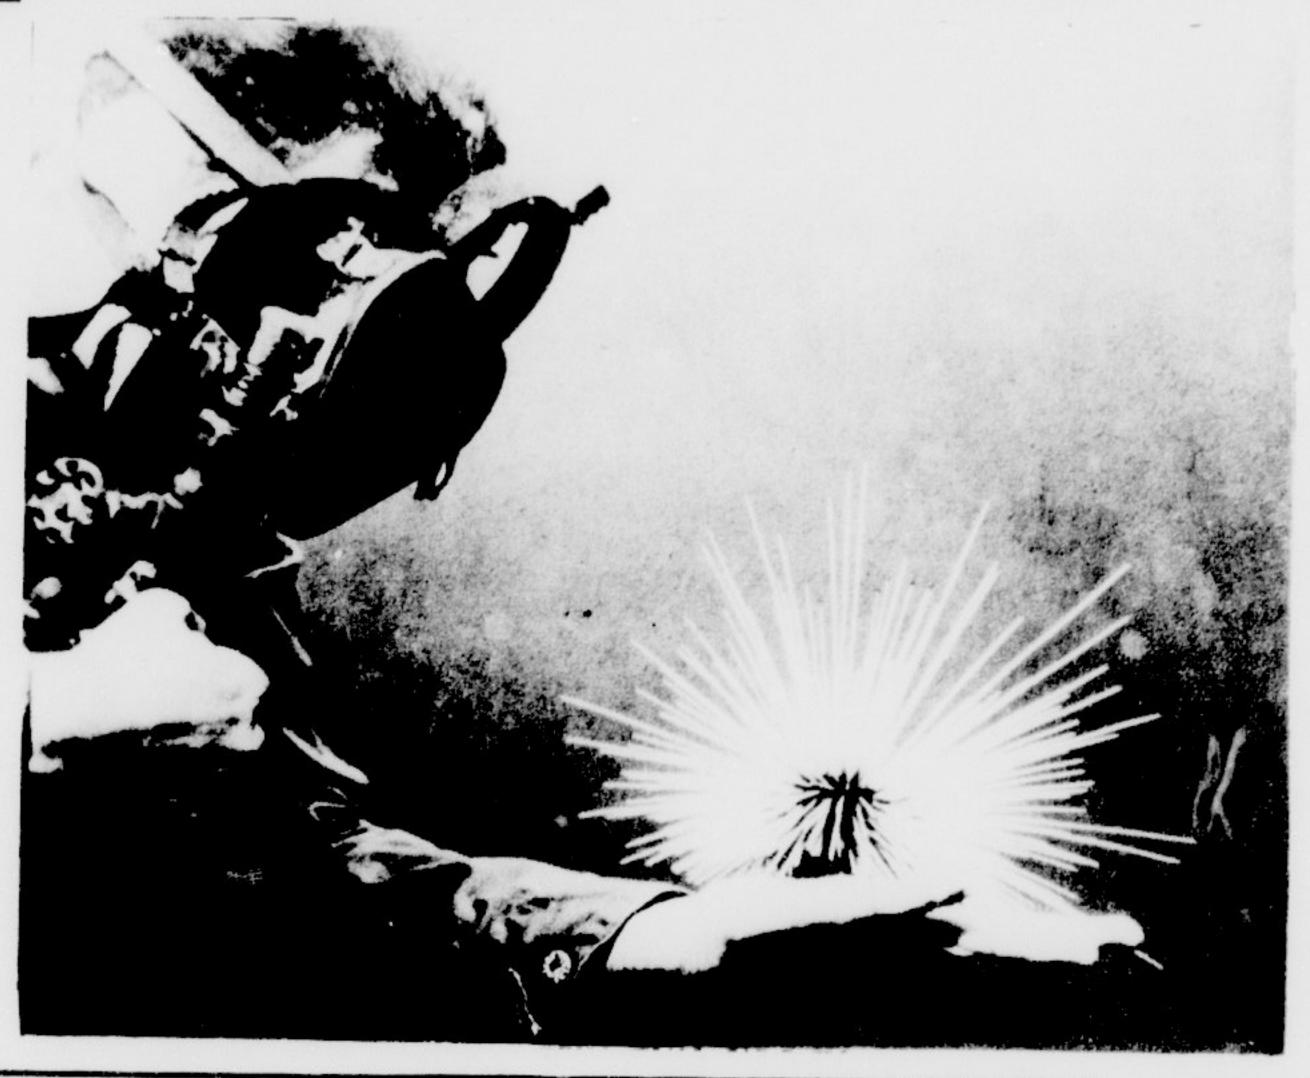

haze, change color, and

apparently signal to one

another. The photographers make

friends with an octopus and teach it to play games. Sharks are shown swimming and feeding. Their actions reveal their character. Yearling green turtles are studied - utterly charming little creatures with front flippers that zip them through the water like swallows. They have a zest for living and a great curiosity towards anything that even vaguely is edible.

The lives of a good many other undersea creatures are examined, including a tulip shell battling with a pink-lipped conch, goat fishes digging in the turtle grass and a snake eel prowling over the sea floor. A jaw fish invades the territory of another jaw fish and there is a fierce battle - a butting match - eye-ball to eye-ball, that ends with the jaw fishes locked together, jaw on jaw, as though each had undertaken the impossible task of swallowing the other. A

dromid crab wearing a sponge on its back is waylaid by a spongeless dromid and is robbed of its sponge.

The film ends with a sequence on the taming of a Nassau grouper. Pederson encountered it on the reef. offered it something to eat, and in a few days, it became a pet, taking food from his hands. It following Pederson about the bottom wherever they went, peering into the lenses, and appeared to like having its back scratched.

Pederson was born on the plains of North Dakota and became interested in the sea during a stint as photographer for an aircraft company at San Diego during World War II.

He and his brother, Verne, built their first underwater camera cases after the war and began making experimental color films of reef inhabitants in the Bahamas in 1948. After perfecting the technique, they

supplied documentary footage for many commercial motion pictures, especially those produced by the Walt Disney organization. Many of the Disney television shows have used his footage as well, the latest being the presentation of "Solomon, the Sea Turtle," in January, 1969.

Pederson is interested especially in studying the undisturbed behavior of marine animals, and in trying to unravel and record the intricate methods they have evolved for fitting successfully into their environment. He has been assisted in these studies on occasion by the Smithsonian Institute and the Office of Naval Research, but usually they are carried forward as a private undertaking.

Admission to the film is by ID and activity card for students and faculty, 75 cents for staff and \$1 for the public.

MRC members want visitation rights

Medical School fund

DURHAM (AP) - ECU will find the road budget for the state during the next two years,

given dim future

Editor's Note: The following statement by Rob Lusiana, Men's Residence Council representative from Tyler Dormitory, is in response to the question: Why do you feel that it is the right and responsibility of the MRC to legislate for open dormitories without outside

The basic premise behind a democracy is that the government be the ervant of the people. After three months of MRC meetings I seriously doubt that the MRC serves the people whom it represents.

The MRC Constitution grants the power to make rules and regulations for the men on the Hill in Article III. Section 1. The MRC could assume the power granted under Article III, Section 6, which provides that the MRC shall have the power to pass legislation not specifically named in the constitution. Since visitation is not named in the constitution, it could be passed under this section.

chances "are very dim."

available until Saturday.

Dr. Jenkins took the matter out of the hands of the MRC by naming an ad hoc committee to decide visitation hours. The committee included only one MRC member, Gary King, one of the most conservative members of the MRC. The committee started work in October.

Some of the members of this committee named by Dr. Jenkins were totally unfamiliar with the problem to the point that they had to be shown what the men's dorms looked like.

The committee has shown a tremendous amount of concern about how everyone felt towards visitation except the men in the dorms.

The committee is now involved in sending out questionnaires to the parents of students. The absurdity of these questionnaires is compounded by the fact that the committee members claim that the purpose of the questionnaires is only to prevent bad publicity, and will not affect the final decision.

Nixon orders air support to Cambodia

WASHINGTON (AP) - Secretary of Defense Melvin R. Laird said today American air power will be employed throughout Indochina and contended this falls within Congressional authorization.

"As long as I am serving in this job, we will continue to use airpower to supplement the South Vietnamese forces in Cambodia." Laird declared.

"We have this authority spelled out in congressional authorization."

Questioned at length, during a news conference, on the American air role in the current Cambodian-South Vietnamese drive to reopen Phnom Penh's lifeline to the sea, Laird said he didn't want to get into the semantics of the problem.

He said U.S. air support has been used all along in Cambodia since the Cambodian incursion by U.S. and South Vietnamese forces in June and that it will be

The dispatch of American helicopters to aid the allied offensive in Cambodia comes six and a half months after President Nixon declared "no U.S. air or logistics support" would be used to aid South Vietnamese fighting in Cambodia.

General College reduces hours

General education requirements have been reduced from 101 hours to 86 by a vote of the Faculty Senate on Tuesday.

The major changes included dropping the literature requirement from English and foreign languages. These courses were placed under the humanities requirements which were raised to 15 credit hours.

History will no longer be required as a sequence course, reducing the social science requirements to 20 hours.

SGA kills increase on Kent State bill

By JIM EICHLING

Two hundred dollars was contributed to the Kent State Legal and Defense Fund by the SGA Legislature Monday after the defeat of an amendment to raise the amount to \$500.

(Staff Writer)

Additional legislation set up a committee to study the hiring of a full time lawyer for the exclusive use of the students; tabled a bill calling for a vote of confidence on the entire SGA in the form of a student referendum; and endorsed the 18-year old Blood Donor bill currently in the N.C. General Assembly.

Rep. Tony Harris, who brought the Kent State bill to the floor from committee, said, "All colleges are closely bound in this.

"It could have happened here." Harris said in reference to the deaths of four Kent State students last year and the subsequent indictments of 27 students.

Harris later submitted an amendment to raise the contribution to \$500. "We are just as close to Kent State as we are to Marshall University.'

The Legislature voted last week to donate \$500 to the Thundering Herd Memorial Fund for Marshall State University.

"Mr. Harris rammed this amendment through committee," said Day Student Rep. Bob Bostrum. "Mr. Harris wants to ship money down the river to a school we have no connection with."

"I certianly did not ram this through committee," replied Harris. "We must show complete support for equal opportunity for justice to be done."

David Edwards. Scott Dormitory representative, added, "I've been collecting money in the Union and we've had all types of people donating; everyone from the freaks to the ROTC has been sitting with us."

Speaking against the amendment, SGA President Bob Whitley said, "The money goes to the American Civil Liberties Union to replenish the money spent on the defense of the Kent State students and for other cases of this nature.

"I am in favor of the \$200." said Whitley, "but I am not in favor of the amendment calling for \$500."

Rep. Edward Askew suggested that the money "could be spent as a good start towards our own legal defense."

"In order to attack the problem directly, we must collect money for our own protection." said Tyler Dormitory Rep. Harry Mills. "Let's not let the fact of prejudice that we owe money to Kent State because we spent money on Marshall affect this vote."

The amendment was defeated 23 to 9. Speaking on the \$200 proposal, Bostrom added, "Why give \$200 at all? If we keep the money we won't need help from outsiders if such a thing comes here.

"Why not donate money to a Midwestern school I read about whose mascot died? They need a new buffalo," he said.

"I see no rationale in giving money to Kent State," continued Bostrom. "Why not Witchata State? They were just innocently sitting on a

Fletcher Dormitory Rep. Cindy Maulsby replied, "I think a living tribute is better than a dead memorial."

Day Student Rep. John Fulton pointed out that the FBI found the Ohio National Guardsmen at fault, yet Ohio Gov. Rhodes has made it a case of Ohio versus 27 students. "This can go all the way to the Supreme Court," said Fulton, "and these students will need a lot of

Bostrum retorted, "If they need bread, let's go down to the Dainty Maid Bakery and get

The bill for a \$200 contribution to the fund passed by a 24 to 9 vote.

LAWYER FOR STUDENTS

The Legislature put a tentative stamp of approval on a bill to hire a full time lawyer for the exclusive use of students, the SGA, and student organizations by appointing a committee to study the proposal.

The bill will go directly to the student body in the form of a referendum after leaving the special committee, to be headed by Fulton.

A bill calling for a vote of confidence on the SGA in the form of a referendum was tabled. The bill was an aftermath of a petition to recall the entire SGA which was declared unconstitutional by the Review Board last

"It has been tabled long enough, I admit," said Belk Dormitory Rep. Gary Massie, "but we ought to do it right if we do it."

A vote of "no confidence" in the referendum will require the re-election of the Legislature. The original bill, introduced by Edwards. included the executive branch of the SGA: however, the bill came out of committee excluding the executive branch "because of the upcoming executive elections next quarter."

Rep. Jim Ward, also president of the freshman class, expressed a "willingness to the student body to seek their vote of confidence."

RECALL THEMSELVES

Pres. Whitley said, "Well, if it must be, and it looks like it must. I would like to say that each dorm or represented group must recall its own representative or the referendum will be unconstitutional just as the petition was."

"We keep pushing this back," said Edwards. "This has gone far enough. I hereby announce that I will circulate a petition in my own dormitory to call for the re-election of my own position and if the students I represent indicate "no confidence" I will see to it that a re-election takes place in which I will have at least one person running in opposition."

Miss Maulsby spoke in support of Edward's plan. "I also will pass a petition in my dorm. I think the best way to show the students that we have confidence in them is to directly ask for their confidence in us," she said.

The two-hour legislative meeting also resulted in the support of a bill currently in the

N.C. General Assembly to allow 18-year-olds to donate blood to individuals, hospitals, and blood banks.

State law presently restricts blood d ...ion

to persons 21 years of age or older.

Hazing causes injuries

fairly as can be expected at this time."

By BECKY NOBLE (Staff Writer)

Sixteen Phi Kappa Tau's received acid burns as a result of a grease-slinging episode last Thursday night on the riverbank at Ye Olde Jail in Greenville. All the injured, which included mostly pledges and a few brothers, have resumed classes. The names have not been released.

Injuries included minor first degree burns, a few second degree burns and some singeing of hair. Bobby Rippy, pledge class president and spokesman for the group, said that a dermatologist in Raleigh said none of the injuries would be permanent. According to Rippy, and Tom Minges, a Phi

Tau brother, the grease fight was a part of their pre-initiation festivities. The brothers obtained the grease from Darwin Waters' service station. was old discarded cooking grease which they took from a big barrel behind the station. Minges said that no one was aware that there was any kind of acid in it.

Then they went out to the river for the fight. As soon as the grease started burning and stinging, they tried to wipe it off and rushed back to the dorms and showered, according to Rippy. Then the group was taken to the infirmary. The majority were treated and released that night. A few were kept overnight, said Rippy.

Dr. Daniel Jordan, who treated the men at the infirmary, refused to comment on the case. "Confidentiality concerning care is not released," he said.

When asked if the pledges were going to sue the fraternity, Rippy said, "No, if we did that, it wouldn't be fraternal," and added that there were no hard feelings. "The incident brought the fraternity closer than it had ever been," he

The fraternity maintains that the grease slinging episode although it is customary before every initiation, is not a part of "hell week." According to Rippy, the Phi Tau's honor "help week" now instead of "hell week," which will be "the new image that the fraternities will try to cut out for themselves in the future."

Dean of Men James Mallory said concerning the incident, "It was one of these good-natured things - you put grease on mes and I'll put it on you."

He declined to say what he thinks should be done to the fraternity, and replied that the Interfraternity Council (IFC) Judiciary board will handle it. However, he did concede that he would not be surprised to see the national fraternity take action "because the incident was hazing."

"We believe we are fairly free of hazing on campus," said Mallory. However, after further questioning, he conceded that it was probably going on "behind closed doors" and said that nothing could be done about it until the fraternities were caught doing it.

The fraternity had not yet been contacted by

the IFC.

Editor's Note: The following is a statement by the brothers and pledges of Phi Kappa Tau Fraternity.

On Thursday, Jan. 14, the brothers and pledges of Phi Kappa Tau had a river trip. On all previous trips oil has been poured on the heads of the pledges. Unknown to the brothers or pledges of Phi Tau, this oil, obtained at a local business establishment, contained an alkali. As soon as it was discovered that alkali was in the oil, the pledges were rushed to the infirmary.

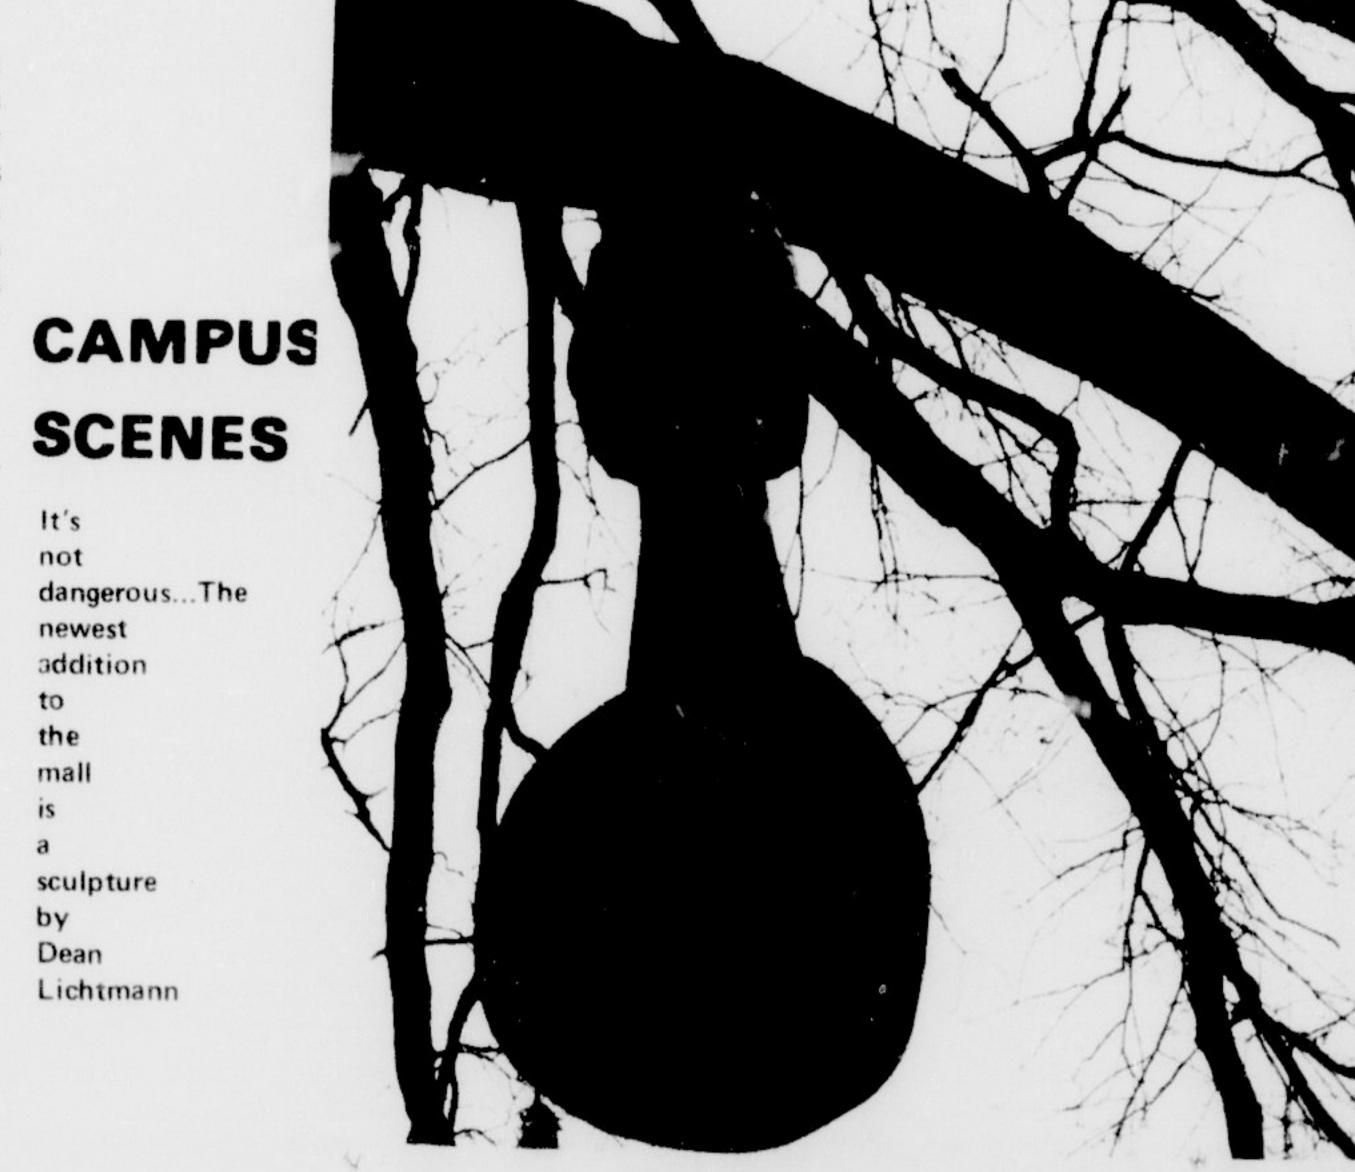

Some pledges and one brother suffered from first and second degree chemical burns, and the reaction of the chemical with the outer layer of skin caused some hair to fall out. Anyone who It's lost hair was immediately sent to a dermatologist. The dermatologist assured us that all hair would grow back, and now four days after the accident, all persons who lost small patches of hair have new hair growing, to with no complications.

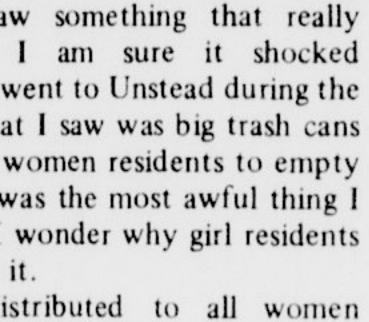

The brothers of Phi Tau did not know nor had any way of knowing that alkali was in the oil. To show our complete innocence of knowledge, no pledge has de-pledged, and we initiated eight pledges who were involved Sunday night.

Public schools face cafeteria crisis

By SONNY McLAWHORN

(Special to Fountainhead) "We cannot operate without pricing ourselves out of business."

That is the way a local school administrator describes the inability of school cafeterias to offer nutritional lunches at low prices.

Glenn Cox, associate superintendent of the Greenville City Schools, said last week that the cafeteria is forced to be a self-sustaining business. "No local tax money," he explained, "is used to maintain the cafeteria."

However a new federal law, called the National School Lunch Act, is designed to relieve that financial crisis.

The new law, which went into effect when schools re-opened in January, is established to provide "lunches to all students at reasonable prices and free and reduced price lunches to those children unable to pay the full price."

The student's eligibility to receive a free or r reduced price lunch is determined by his family's income level. The income scale, which is distributed by letter from the local school board to parents, considers family income, number in the family and the number of children in school.

Income levels are set by the U.S. Secretary of Agriculture. The requirements are subject to annual review, in order to keep income levels in line with the cost of living.

Cox, who supervises administration of the program for the local school unit, said forms had been sent to the parents of all students attending Greenville city schools.

Each form is reviewed by the school's principal to determine eligibility. Parents may

appeal any decision to Cox. Under the new program, Cox said the school is required to provide a nutritional lunch to each child who does not receive a good lunch at

home. "A good lunch," said Cox, "means one which provides one-third of the minimum daily requirements as established by the U.S. Department of Agriculture."

"The school," he explained, "is also required not to discriminate against the person who receives a free lunch."

To carry out the second part of the federal government's mandate, the Greenville schools have implemented a ticket system to replace the old method of students' paying the cashier at the cafeteria line. In the elementary schools, teachers assume the task of collecting money for lunch.

According to Cox, this system reduces money collection to a "face-to-face" basis between student and cashier or homeroom

"For each free lunch we serve," explained the administrator, "we receive 36 cents from the federal government. For each reduced price lunch, we get 20 cents."

Lunch prices in the Greenville schools are now set at 40 cents at the high school and at 35 cents at elementary schools. All reduced price lunches cost 20 cents.

Each elementary school now has a program of providing free breakfasts. Since federal support of this venture is limited, the Pitt County Department of Social Services helps to provide the labor to operate the program.

"Last year we experimented with the breakfast program in two schools," Cox reported. Teachers observed a "dramatic" difference in the attention spans of the children who had received free breakfasts, according to

"Schools are assuming a more complete responsibility for our children," Cox observed. "I can foresee the day when each child will receive a free lunch."

Attorneys for the youths, contending

"public high school students are entitled to the

enjoyment of fundamental constitutional

freedoms," asked that school officials be

restrained from expelling students on "account

of their peaceable wearing of clean 'long hair."

School officials justified the regulation with

Saxophonist elected to high post

James Houlik, ECU music faculty saxophonist, was elected to the office of International Coordinator of the World Saxophone Congress during the organization's recent convention in Chicago.

Houlik, assistant professor in the ECU School of Music, will direct the activities of the Congress during the next 18 months and will also preside at the next convention, scheduled for Toronto.

During the past year, he served on the executive committee of the Congress and was coeditor of the organization's newsletter.

Featured at the Chicago convention were performances by major saxophonists from France, Belgium, Japan and the U.S. Houlik presented a lecture-recital, accompanied by Charles Stevens, chairman of the ECU School of Music piano department.

The World Saxophone Congress is developing communications among teachers, performers, and students throughout the world.

According to School of Music officials, Houlik's election to this post is a sign of his 'growing stature as an important musician and

Houlik has performed in New York, Indiana, Pennsylvania, Virginia, West Virginia, Kentucky and the Carolinas. He has been described as "a major saxophonist of his day" by the Washington, D.C. "Star."

LOA Corporation attempting to settle delinquent accounts

By PHILIP WILLIAMS

(Staff Writer) LOA Corporation, a mail order firm, is making a strong attempt to collect on delinquent ECU student's accounts.

Many of these overdue accounts have not been paid because of misunderstanding the purchasing agreement.

LOA deals mainly in small kitchen appliances such as blenders, toasters, coffeepots, and

The LOA catalog implies that a person may earn "credits" with the company by contracting with others for LOA purchases. ECU students were approached with the proposition that they could keep any item in the catalog if they could give seven away.

Some of the students did not clearly

understand the implications of the arrangement. The corporation has already tried to obtain

payment on the orders by means of letters, statements, and notices.

LOA has notified the overdue accounts that a collecting agent will be in the Greenville area in the near future to contact them personally.

Deputy Director of Federal Prisons appointed ECU staff to

By FRANCEINE PERRY (ECU News Bureau)

Herman G. Moeller, retired Deputy Director of the Federal Bureau of Prisons, has joined the faculty of the ECU Department of Social Work and Correctional Services.

At ECU, Moeller will be associate professor and coordinator for Correctional Services. He will assist in the development of a curriculum for a bachelor's degree program in the field of corrections. Of his appointment to the ECU faculty,

Moeller said: "I am very glad to be here. This is really a second career opportunity for me, which I have looked forward to for a number of

Moeller described his work at ECU as helping to provide "quality education for students interested in law enforcement and corrections. Also of major importance is the development of continuing educational services for the personnel of the state's criminal justice

Moeller, 54, has served more than 33 years in the nation's correctional system. His career with the Bureau of Prisons has included positions as assistant director of the Divisionsof Inmate Training and Treatment, Managemen and Planning, and Community Services.

agencies, he said.

Commenting on the award Distinguished Service Award from Attorney General John N. Mitchell - the attorney general termed Moeller's innovations and philosophy of corrections the "foundation upon which the future of the correctional elements of our criminal justice system rests.

Study by ECU speech expert appearing in Swiss journal

An article by an ECU speech and hearing specialist will appear in the next issue of an international publication.

Dr. Hal J. Daniel III of the ECU School of Education's Speech and Hearing Center will have a study included in "Folia Phoniatrica, International Journal of Phoniatry," published in Basel, Switzerland.

His article is concerned with nasal voice quality in the speech patterns of cleft palate

It presents information helpful to the speech pathologist and physician in dealing with the problems of cleft palate speech, and a method of determining the overall voice quality of the

handicapped speaker is defined.

Daniel has been nationally recognized for hi work with speech and hearing problems. Last March, he was featured in "Time" regarding his research into the connection between water

flouridation levels and hearing problems. Results of his work were published in an American Medical Association journal.

Daniel was awarded a grant in June from the Mid America Hearing Research Foundation to study at the University of Zurich with Dr. Ugo Fisch, one of the world's foremost authorines on middle ear pathology.

Daniel holds degrees from the Universities of Tennessee and Southern Mississippi.

Chemistry seminar

Dr. W.R. Gilkerson. professor of chemistry at the University of South Carolina will present the weekly chemistry seminar at ECU Friday, Jan. 22.

The seminar topic is "Ion-molecule Interaction in Solution." It is scheduled for 3:00 p.m. in Flanagan Building, room 209. Coffee will be served at 2:30 p.m in Flanagan 220.

All interested persons in the local and campus communities are invited to attend.

Exhibition

The intaglio print "with strings attached" by Donald Sexauer of ECU, has been accepted by a jury for exhibition in the Audubon Artists 29th Annual National Exhibition.

The Exhibition, to be held at the National Academy O Galleries, 1083 Fifth Ave. New York, opens to the public Wednesday evening, Jan. 20.

Pi Omega Pi

The ECU chapter of Pi Omega Pi, national honorary society for Business education students, has initiated four new members.

According to Dr. Frances Daniels, Beta Kappa chapter sponsor in the ECU School of Business, the initiation recognizes the "superior scholarship" achieved by these prospective business teachers: Nancy Laura Cannady, Ruth Kathleen Elmore, Rebecca R. Worrell, and Nancy Ann Mulhern.

'The Fox' crusades for pollution cleanup drive

Editor's Note: The following article was reprinted from The Melancholy Accident, a pollution and environment newspaper. It originally appeared in the Evening Star in Washington, D.C.

CHICAGO - At about 10 o'clock last Friday, a brawny man in work clothes walked into the lobby of a steel company in East Chicago, Ind., carrying a big metal can.

As the receptionist glanced up, he calmly removed the top of the can and sloshed the contents across the shiny tile floor. The stench was terrible, as about 50 pounds

of dead fish and sewage came spilling out. "What are you doing?" the stunned

receptionist screamed. "This will explain," he said, handing her a

note. Then he strode from the building. One secretary was so nauseated by the mess on the floor that she was taken to see a doctor. Other employees had to leave their offices and go outside for air.

"The Fox" had struck again.

"ZORRO"

And who is "The Fox?"

He's sort of an antipollution "Zorro", who has been harassing various companies, evading the police, and making himself a minor legent around Aurora in Kane County, Ill.

He drifted over to Indiana on Friday because the steel company there has a subsidiary near Aurora that is an air and water polluter.

Hardly anybody knows who he is, especially the police and his victims. But whenever he blocks a company's drainage system, tries to seal off its chimney, puts a dead skunk on the porch of an executive, or dumps dead fish in a lobby, he leaves a note telling why, and always signs it "The Fox."

During his adventures, "The Fox" has been chased by plant guards, has crawled through drainage pipes, climbed roofs in the dead of night, and a shot has been fired in his direction. It is rumored that at least one manufacturing $V_{i,j}$ firm has posted a reward - cash or a job promotion – for his identification.

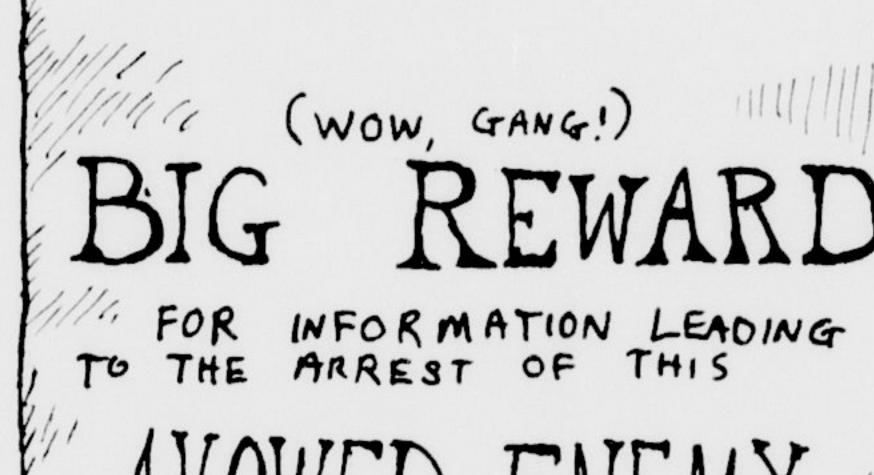

ORDINARY CITIZEN

In the finest romantic traditions of all mystery crusaders, "The Fox" by day is an ordinary, soft-spoken citizen. He's approaching middle age, has a respectable job, a family, and has never before gone outside the law.

"I'll tell you how this 'Fox' thing got started," he began. "I've always lived in Kane County and I remember how beautiful it was. nothing can live.

FOR WILLFUL OBSTRUCTION OF THE BOWELS OF INDUSTRY & ASSAULT WITH A DEADLY FISH.

"I do a lot of hiking in the country and over the years I saw what some of these comapanies were doing to the air and to the streams. I saw them dumping filth into the Fox River and creeks where I caught fish as a kid, where ducks could swim. Now I was seeing streams where

"Nothing seemed to make them stop. So I decided that even if I was only one man. I'd do something. I don't believe in hurting people or in destroying things, but I do believe in stopping things that are hurting our environment. So I have been doing something. I want them to know why it is being done, so I always leave a note suggesting that they clean up their mess, and I sign it 'The Fox.' That's because of the Fox River.

AVOIDS BEING SEEN

"I'll give you an example. There's this sucsessful. stream, Mill Creek, and it used to have good bluegill fishing. Then this soap manufacturing plant dumped soap curds and other waste in it until it was lifeless.

"The plant has a 42-inch drain, so I plugged it up with bales of straw, rocks, logs and things. I guess I did that about five times. So everytime they'd have problems and have to get in there and clean it out. I'd always leave them notes, saying things like, 'Why not put your engineers on this problem and eliminate your pollution?"

"Generally, I'm very careful to avoid being seen. Why, when we tried to stop up the chimney of an aluminum processing company I had help on that one - we had to get up on their roof the first time to measure the chimney, and a second time to install the chimney cap. Actually, it didn't work too well. but they got the message.

TIGHT-LIPPED

"The soap company has reacted properly. They are making an effort to improve and it shows in the creek. But the aluminum plant they're stubborn. You should see the filth that comes out of their chimney and drain. So that's why I had to go to their parent company and throw those fish around. It was a nauseating thing to do, I guess, but why shouldn't they get a sample of what they are doing to nature?"

"The Fox" has been so tight-lipped that even his family and relatives don't know about his activities. He has sat in taverns and heard himself discussed. Only a few like-minded friends share his secret and help on heavier jobs.

I'll never forget the last words this dashing, daring figure said to me. As he left, he turned, waved and said:

"Well, I've got to get home to supper."

Anti-pollution experiment

Manure added to food

WASHINGTON (AP) Government scientists are feeding barnyard manure back to cows and sheep in an experiment that some day may give consumers more food and

s pollution. Cows utilize only 40 to 60 wer cent of the grass they eat. The rest ends up on the

manure heap. By chemically treating the manure and combining it with regular feed such as soybean meal in the form of pellets, scientists claim the animals can consume much of their own

wool and milk. The experiments are being

Physics department expands with aid

By FRANCEINE PERRY (ECU News Bureau)

The phenomenal growth of the ECU physics department over the last few years could well be one of the outstanding success stories in modern science.

In 1963, the physics faculty numbered just three persons, with no funds from outside

Today the Department of Physics boasts 11 fulltime professors, with a support staff of four. It is housed in a new building with plentiful facilities: research labs, classrooms, offices, and electronics instrument shops.

And the level of outside support for ECU physics has risen from zero to almost half a million dollars' worth of federal and foundation grants in the last five years.

Under the guidance of Department Chairman J. William Byrd, the physics faculty has actively sought funds from various sources in order to purchase scientific equipment, finance faculty and student research projects, and host institutes for physics educators.

As the figures show, they have been

SOLICITING FUNDS

"The level of outside monetary support has certainly contributed greatly to the rapid development of the physics department," says Dr. Byrd.

"And our success in getting grants has been the result of the efforts of all members of our physics staff.

According to Dr. Byrd, a great deal of time and effort is involved in the soliciting of funds from such agencies as HEW, the National Science Foundation, the Kettering Foundation and the Atomic Energy Commission.

The fact that the ECU physics department has been so well rewarded with financial support has much to do with ECU's great desire to expand and experiment in new areas. Dr.

Byrd believes. "Our staff has imagination in developing innovative programs for the field of physics; we are eager to try new things," he noted.

received indicates that others agree."

Recent awards to Byrd and his statt have made possible several of their plans.

FUNDS GRANTED

They have received an "electron spin resonance spectrometer" and a sizable

contribution toward the purchase of a "Tandem Van de Graaff particle accelerator," a useful instrument for basic research in nuclear,

atomic and solid-waste physics. The accelerator will be the next largest in the state, second only to the one at the Triangle Universities Nuclear Laboratory which is a facility shared by Duke, Carolina, and N.C. State Universities.

A rather costly piece of equipment (\$200,000), the accelerator will not exactly "split atoms," but it can fire particles into the electron structure of an atom.

Other granted funds have financed various institutes for teachers of physics on the college

For instance, one such project will provide financial support to junior college teachers from all over the United States who come to ECU during the summer to study modern electronics.

While discovery through research is every scientist's dream, the ECU physics department has not forgotten that it is primarily an educational facility.

SEVERAL DEGREES OFFERED

"We are concerned with undergraduate as well graduate students' education, and we must try to provide better physics personnel for high schools and colleges as well as for research." says Dr. Byrd.

ECU's comprehensive program in physics includes active programs for training researchers and teachers in the areas of nuclear physics, plasma physics and molecular structure physics.

The curriculum now offers several degrees: BS in applied physics - a new degree which combines physics and engineering.

This program, says Dr. Byrd, involves modern electronics, mathematics and computing science, as well as pure physics. The applied physics degree was designed with the "And the amount of outside support we have advice of many major employers of technical personnel across the nation.

> Because physics is a field which offers unlimited possibilities for young people who are choosing future careers, the ECU physics department has made mighty strides ahead in their preparation and training of them.

New Fountainhead section should alleviate discontent

This issue carries a section entitled "SGA Corner" with the following notation:

"This section of each Thursday's issue of Fountainhead has been made available to the Student Government Association for the discemination of whatever information the SGA deems should be made available to the readers. All inquires and material should be directed to SGA President Bob Whitley, who has ultimate authority over this section."

This rather unprecedented action is an attempt on our part to open lines of communication directly between our elected officials and their constituents with no "third party" in between.

There have been many complaints by SGA officials concerning differences of opinion over what information should be examined in depth as well as making the determination of which stories are

important enough to run and which

By providing this quarter page section to the SGA with the stipulation that they are responsible for it and can do with it whatever they wish we hope to alleviate some of this discontent.

Hopefully this section will contain pertinent information of relevance to the student body and will not be allowed to stagnate. In addition it will provide a forum from which the reader can be sure that the "the other side" is speaking in any situation where there is disagreement between the newspaper and the SGA.

By utilizing the potential provided by having this space made available to them on a regular basis the SGA can do a great service to the student body and make the newspaper a more interesting one to read.

We hope that the SGA will never allow the section to be run blank.

The Doctors Bag

By ARNOLD WERNER, M.D.

(Copyright 1970 College Press Service) QUESTION: What can I do, I'm madly in love with my history professor? I get so keyed up I can't listen to him in lecture. As he walks around in front of the room, I stare at him and don't hear a word he says. He thinks I have a breathing problem because I sniff to get the full aroma of his after-shave lotion. He is not really all that beautiful, but has charisma. How do I stop? How can I sleep? I must begin to study or I'll be canned for good.

ANSWER: The woman student enamored of her professor finds no relief from her distress in the knowledge that this is a fairly common occurrence on a college campus. Nor is there any comfort in knowing that most professors would be even more distressed if they knew of the attraction. In most situations such as the one you describe, there is usually no basis for a relationship as little real information is known about the person so idolized. Rather, the person suffering from this malady usually has rich imaginations about what the professor is like, what it must be like to be with him, and how much more attractive he is than other people she knows.

Day dreams about professors and strong attractions for them are not usually disabling and most women so inflicted enjoy the situation very much. This is a different matter than the one you describe; as your letter so clearly indicates, the infatuation has become disabling. Strong attachments between men students and women professors seem much less common or at least are less frequently complained about.

Some of the clues that explain the attractions are in the disabling nature of the involvement. Such a strong attraction to one person will successfully keep you from entering into any relationship with men who are more accessible to you. Sometimes shy people having a rough time socially find solace in their fantasies as well as a reason not to be confronted with their difficulties. At other times, strong attractions identified as "love" are

mature, protecting figure and have at their root strong needs for dependency.

worker to discuss your concerns.

long range effects upon the brain of moderate drinking and what are effects on other organs?

poured through a hole drilled in the top of your of moderate. Under the guise of moderation, some people consume immense amounts of alcohol and do permanent damage to their livers. In an experiment, normal volunteers many people consume during a weekend of heavy social drinking. Biopsies of their livers showed fatty deposits similar to what is seen in early liver disease. The condition cleared, however, and no definite conclusions could be

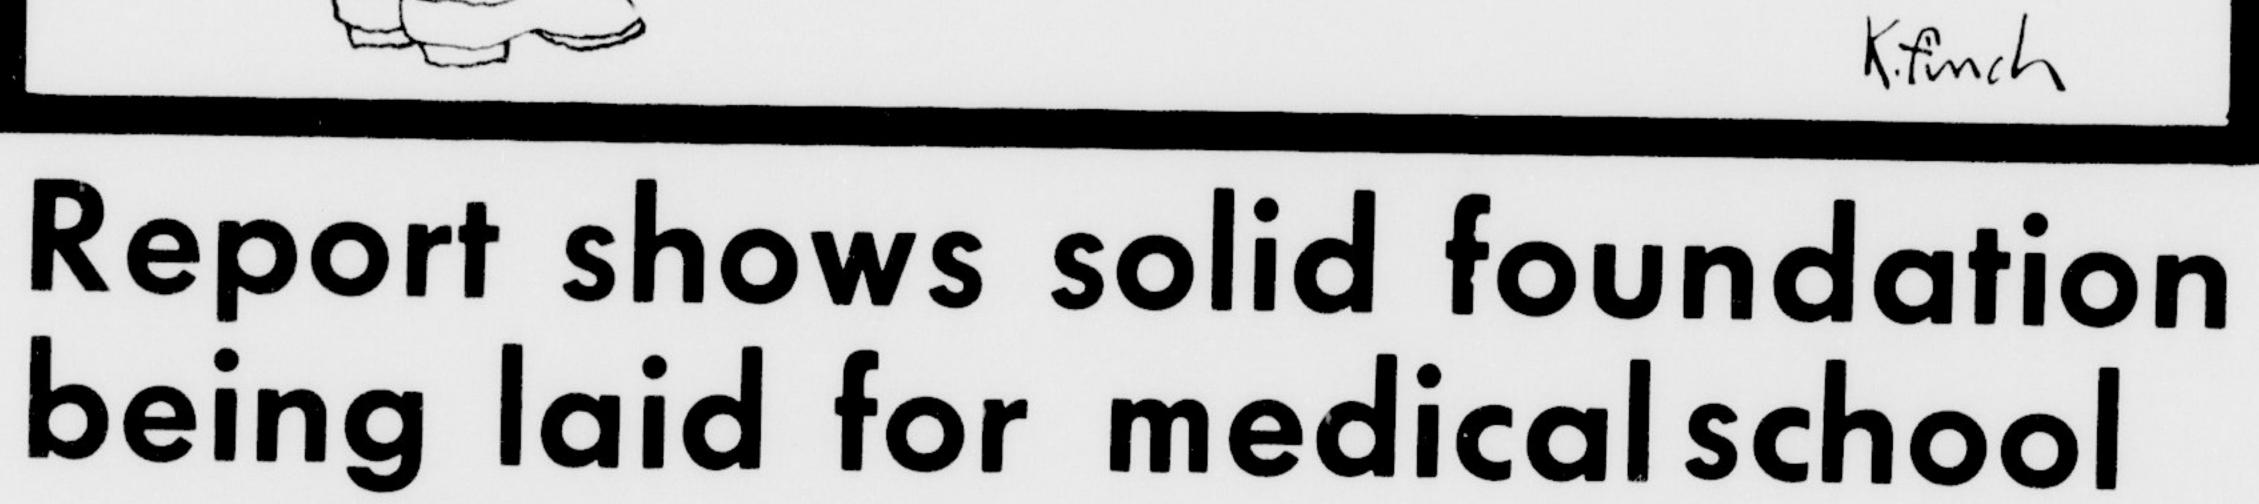

It is likely that a person would not be damaged by small amounts of alcohol consumed on a regular basis or an occasional weekend indulgence. Nonetheless, individual variations must be considered as people who have recently suffered damage from hepatitis or damage to the liver from toxic agents or drugs are probably much more susceptible to subsequent damage from alcohol. Brain damage does occur in the severe alcoholic, but such persons usually have poor nutrition and this is probably a factor in what occurs.

expressions of a need for closeness with a

Sadly, on occasion the need to feel powerful, wanted and loved, or dissatisfactions with his own life leads the professor to mistake the attentions of a student for more than they are. Relationships formed on this basis may have disastrous results for everyone. I strongly urge you to contact a professional mental health

QUESTION: Recently I've heard that each ounce of alcohol consumed by the body kills 10,000 brain cells. Is this true? What are the

ANSWER: The only way I know of one ounce of alcohol killing 10,000 brain cells is if it is head. The effects of moderate drinking al alcohol obviously depends on your definition imbibed amounts of alcohol not unlike what

THEIR MOST ORIGINAL

YEAR BOOK PICTURE

IN YEARS!

In 1969 the General Assembly of North Carolina authorized ECU to plan and develop a two-year school of medicine. Since that time the University has made great progress in developing the medical school. In the past few months we have received numerous requests from many people for information about our progress, accomplishments, plans, and what remains to be done to begin the school. The following is an attempt to provide this information.

ECU has recruited the core faculty to plan and develop the medical program. Dr. Wallace R. Wooles, from the Medical College of Virginia, has been appointed Dean and a total of eight full-time faculty representing the disciplines of anatomy, physiology, biochemistry, microbiology, and pharmacology have been added. These people have received their training form such outstanding institutions as the University of Tennessee, Minnesota, Kansas, Iowa, Brown, and the University of North Carolina at Chapel Hill and all are eminently well qualified.

Included in this core group are chairmen of the departments of anatomy, physiology and pharmacology; chairmen of the departments of biochemisty, microbiology and pathology will soon join the staff. To supplement the efforts of the core of full-time faculty, 28 physicians in the Greenville area have accepted positions as part-time clinical faculty. More faculty in both areas will be added as the program continues to develop.

These physicians are graduates of the finest medical schools in the country. They represent all of the major specialities in medicine: surgery, pediatrics, medicine, obstretrics and gynecology, psychiatry and the newly created specialty of family practice. Over 90 per cent of these physicians have received the highest certification possible in their respective medical specialties. Some are even certified in two areas of medical specialty.

The curriculum design is of such a nature that our students will be able to transfer to any four-year school of medicine. Certainly, there are no serious differences between our curriculum and those presently in operation at our sister institutions; Chapel Hill,

Bowman-Gray and Duke Schools of Medicines. We would like our students to transfer to one of our sister institutions for their advanced clinical training. In this regard we have met with the deans of the Schools of Medicine at Chapel Hill, Duke and Bowman-Gray concerning the possibility of our students to transfer into the clinical program at these schools. These schools have expressed a desire to cooperate and a willingness to accept, collectively, up to 16-20 students per year from ECU. It is most important to understand that this assumes that these schools, collectively, will have sufficient space in their clinical facilities and that our students are elgible for admission according to existing admissions policies of each of the institutions.

The School of Medicine is presently housed with the Department of Biology in a new Science Complex which comprises approximately 90,000 square feet. There are sufficient facilities to handle a beginning class of 16-24 students and house up to 24 full-time faculty. Facilities include classroom and teaching laboratory space and is now being used

to teach laboratory courses in human gross anatomy and in mammalian physiology. These courses are being taught by the faculty of the medical school to Allied Health students.

There are also sufficient clinical facilities on the campus and in the city of Greenville which are more than adequate for the clinical teaching necessary for a two-year medical school. A 12 week period, at the end of te second academi year, has been set aside to provide our students

an opportunity to observe and participate in the family practice of medicine as practiced in faculty approved office practice and community hospitals. There is a forty bed infirmary on campus in the Division of Health Affairs which can be used for the teaching of normal physical examinations.

The facilities of the Pitt County Memorial Hospital have also been made available for teaching purposes. This hospital with its attendant patient population and associated clinical facilities is more than adequate for the teaching of physical diagnosis and other clinical

courses. A new 350 bed general hospital is due to be completed in 1973 to replace the existing hospital. This new facility will also be affiliated with the medical school and will provide the most complete, modern facilities for patient care and teaching.

It is because of the availability of adequate space for the academic and clinical programs that ECU can be ready to begin a class no later than 1972 and, in fact, with adequate legislative support, can begin in 1971. It will be a surprise to many that education of medical students can begin without first constructing facilities that will cost millions of dollars. The existing facilities are adequate for a beginning class of 16-24 students and would even allow for limited expansion. Further expansion would be dependent upon construction of a separate medical science building.

We have requested from the legislature a total operating budget of \$2.6 million for the 1971-1973 biennium for an incoming class of 20 students. We have also requested a budget for capital improvements to construct, on land owned by the University, a medical science building to house all of the faculty and departments, classrooms, and teaching laboratories, administrative offices, an audio-visual center and a library for the Division of Health Affairs which will hold up to 150,000 volumes.

Throughout this report we have referred to the Division of Health Affairs. This Division includes the School of Allied Health and Social Professions, the School of Medicine, the infirmary and the Development Evaluation Clinic. It will ultimately include the School of Nursing and all health-related programs established at the University. The faculty of the School of Medicine will teach the medical sciences pertinent to all these programs. It is obvious, therefore, that maximum utilization of teaching facilities will occur and that the knowledge and expertise of the medical faculty will be made available to a larger number and wide spectrum of health-related professionals. ECU has made sound and rapid progress in

fulfilling the mandate of the 1969 General Assembly - to "plan and develop a two-year school of medicine." Although we have done much, much remains to be done; but a planning budget can accomplish only so much. An operating budget appropriation is necessary to complete the plans and begin the process of educating medical students.

The need for additional physical manpower is critical now and will continue to become more critical and urgent in the years immediately ahead. Unfortunately, because of the long lag time in the training of physicians, plans implemented now will not result in any increase in the number of physicians for at least six years. It is imperative that we begin as rapidly as possible.

Because of the immediate availability of facilities and because of the efforts of the full and part-time faculty, ECU is ready to begin medical education as early as 1971 and certainly no later than 1972. There are now many qualified North Carolina men and women who are unable to enter into the study of medicine because of a lack of opportunity in medical schools within the state. The availability of medical education at ECU will keep many of the talented young people within the state and will educate more North Carolina students to solve the physician manpower needs of all the citizens of North Carolina.

The Forum

Long hair

To Fountainhead:

I find Coach Carson's attitude toward Neill Ross's long hair typical in the growing polarization between the youth of today and the "older generation." If a person decides that he wants long hair, it is a personal decision of which no one else has a right to interfere with or punish for. Coach Carson, would you have kicked Neill Ross off your team if he changed religions? This is the same kind of personal decision.

It is time people recognize long hair as not a "sign of rebellion" but as a sign of the changing times which the older generation does not want to let go of. Times change and so do styles. If you don't change with them, you will be left. behind looking foolish and feeling. contemptuous to all of the new generation.

Sincerely, Jeff Schimberg
