

December 15, 1967

Dr. Karel Absolon

Dear Karel:

We are again interested in problems relating the effect of histamine to lung edema. Hans Ballin tells me he recalls that you did some such experiment, and I should like to know from you whether you did and if so, what the results were. Especially, I would like to know the condition under which histamine produced pulmonary edema.

With the Season's greetings, I am

Sincerely yours,

Maurice B. Visscher

*I used antihistaminics to see whether they would prevent development of the various ~~so~~ pulmonary edema by the various agents in the isolated lung, it did not. ~~It did not in the case we used~~
interesting*

With the season's greetings, I am
