

NAVY DEPARTMENT
OFFICE OF NAVAL INTELLIGENCE
WASHINGTON

1. A very considerable number of reconnaissance photographs have reached the Division of Naval Intelligence which are not adapted for use in ONI standard manuals or were not available at the time when these manuals were issued. The Recco Supplements have been initiated as a means of making available reconnaissance photographs of potential value to combatant personnel and training establishments. Individual supplements will contain photographs

which relate to specific subjects and will be designed for incorporation in U. S. Navy Task Binders. These publications may be used independently or broken up for incorporation in appropriate sections of standard ONI manuals.

2. Additional supplements will be issued as material becomes available.

H. C. TRAIN,
Rear Admiral, U. S. N.,
Director of Naval Intelligence

Op-16-P-2 A7-5/FS Serial No. 2048116.

AERIAL VIEWS OF JAPANESE NAVAL VESSELS

The following pages show various types of Japanese naval vessels as they appear from the air. Through these photographs it is hoped that the user may familiarize himself with the characteristics which distinguish types and classes of Japanese naval vessels when observed from above.

This supplement is designed for inclusion among the loose-leaf charts and ship jackets which constitute ONI 41-42, Japanese Naval Vessels. The holder of this publication may wish to incorporate individual pages in jackets relating to the ships which appear in these photographs.
