

## STANDARD RECOGNITION MATERIAL

Four things have been done so that Recognition Material prepared for the U. S. Fleet by the Navy Department may be used both easily and flexibly.

1. All material is issued on standard-size pages—6 by 10 inches.
2. Manuals on each fleet or air force, together with all supplementary material, are issued in filing boxes or between stiff covers.
3. The manuals are made up either as loose-leaf pages, or as one or more small booklets covering specific units or types.
4. The Task Binder—loose-leaf ring type—has been provided, along with blank separators for indexing.

The Task Binder is designed as a permanent, protective holder for recognition material taken from separate manuals and required for a certain operating area. Contents of manuals not needed for such operations may be left in their original covers for future use. In the Task Binder, material may be arranged in any way to meet individual requirements.

Following is a list of manuals now available in standard size:

|                      |                                                                 |
