As labor occurs in the larger proportion of cases between 270 and 290 days from the last menstruation, it is usual to reckon from the first day of this period, taking as the mean 280 days. The table presents at a glance the beginning and end of 280 days for every day of the year. Find the date of menstruation in the upper line of the horizontal column, and the figure below, with the corresponding month, will indicate 280 days. In leap year, if the period of pregnancy includes February, the time of labor will be one day earlier than that given in the table.
