## LOCAL NOTES AND TOBACCO JOTTINGS.

BY O. L. JOYNER.

There will be no tobacco sales on Friday, circus day.

There are more regular buyers following the sales in Greenville than any other eastern North Carolina market.

Tobacco is selling well and good tobacco especially is away up during the last few days. Those who have wrappers can now begin bringing them on.

We are frequently asked what per cent. of the crop has been sold, and we have frequently asked that question. From the points of information we should say that about 50 per cent. of the crop has been sold, and our candid judgment is that 75 per cent. of the brightest has already been marketed.

For the past few years we have been telling our people that we had the finest bright tobacco growing section in the world. Now read what some of the best judges in Virginia say about it. More will follow later.

RICHMOND, VA., OCT. 25th, '95.

Mr. O. L. Joyner,  
Greenville, N. C.

Your letter to our Mr. Boyd duly received, and at his request we answer. In color, Eastern North Carolina is the best.

Yours truly,  
JAMES N. BOYD & Co.

NEW YORK, Oct. 14th, 1895.

Mr. O. L. Joyner,  
Greenville, N. C.

Your favor of the 7th inst. is found on my return this A. M. The bright tobacco sold on the Greenville, N. C. market suits our purposes well and I know of no section, or market which supplies a better quality of goods for our purposes.

Yours truly,  
J. B. COBB,  
Manager, Leaf Dpt. A. T. C.

## RICHER AND HANDSOMER

Than any ever produced. My Clothes, Hats and Furnishings, I'm talking about. Look over the stock; it's complete now, and see if you don't agree with me. One of two things I always mean to do: To sell you better goods than you get elsewhere for the same price; to sell you the same goods lower than you get them.

**FRANK WILSON,**  
The King Clothier.

LYNCHBURG, VA., Oct. 26th, '95.

Mr. O. L. Joyner,  
Greenville, N. C.

Yours of the 23rd duly to hand. We consider the tobacco from the Greenville section as good or better color and flavor than any other section in North Carolina. It is noted for fine Cutters and Smokers.

Yours truly,  
CLARK & COLLINS.

DANVILLE, VA., Oct. 8th, 1895.

O. L. Joyner,  
Greenville, N. C.

We have your favor of the 7th, and in reply, beg to state that we regard the tobacco peculiar to your section of the Bright Belt very highly, particularly the class of goods grown around Greenville. These we think of all the North Carolina Brights are the choicest, the color and texture being well nigh perfect.

Yours truly,  
C. D. NOELL & Co.

Mr. Whichard says that he found no cigar at the Atlanta Exposition that could equal the Southern Leader, at D. S. Smith's.

10 slate pencils for 1 cent at Reflector Book Store.

Two acquittals followed each other in the insurance fraud cases being tried at Carteret county Superior Court, and realizing that the State could not get a fair trial there Judge Graham granted a motion for removal to another county. The other cases were removed to Jones county and the trials are now in progress there.

While the printers on the Washington Progress were out at dinner two boys that worked in other printing offices there, went in the office, set up an obscene line of type and slipped it in the advertisement of a lady. The boys were caught and tried before a Justice who sentenced them each to ten days in jail and \$25 fine.

The Hotels and Restaurants all buy their Butter from me. Why? because I keep the best.

D. S. SMITH.

**JOEL PATRICK,**  
COTTON -:- BUYER,  
GRIFTON, N. C.

Will be in Greenville Wednesday and Ayden Friday of each week.

THE EXPERIMENT STATION

AT RALEIGH, NORTH CAROLINA.

Crop Conditions—Rust in Small Grain.  
Experiment Station Report—Co-  
Operative Dairying—Trucking  
in the South—Ques-  
tions and Replies.

The Experiment Station Bulletin.

The standing offer is made to send the bulletins of the station to all in the state who really desire to receive them. They are specially prepared to be serviceable as far as possible to the practical farmer. Thousands of farmers have already taken advantage of this offer. Unless you really want to be benefited please do not apply for them as we have none to throw away. If you desire to read them, write on postal card to Dr. H. B. Battle, Director, Raleigh, N. C.

Crop Conditions During September, 1895

The following is extracted from the weekly weather crop bulletin of the state weather service for Oct. 7, 1895, and gives the crop conditions at the close of the season:

The month of September was favorable to about the fifteenth; then, however, a severe drought set in, with probably the most remarkable hot spell ever recorded in this State for September. The maximum temperature remained above 90 degrees (except in the mountain sections) for nine consecutive days, the highest being 103 degrees in the Central District and exceeding 100 at many points in the Eastern. These conditions forced a rapid opening of cotton; small bolls and leaves were shed considerably, and the top crop to a great extent was prematurely ripened. The corn crop was, however, beyond the reach of damage. All the smaller crops, late potatoes, peas, peanuts, etc., suffered from drought. The conditions were very favorable for saving hay and fodder, of which large quantities have been stored. But fall plowing and planting have been completely interrupted by the dryness. At the end of September, streams and wells were getting very low.

The drought continued during the first week of October, and farming operations are at a standstill except picking cotton, which has progressed rapidly, and gathering of corn. Cotton has opened so rapidly that the crop will probably be gathered early. The harvest of rice is about completed. On the first of October frost occurred over a considerable portion of the State, which did some damage to tobacco yet uncut.

The following table shows the departure in temperature and precipitation for each month during the season:

Month.	Departure in Temp.	Departure in Precip.
January.....	-1.9.....	+1.89
February.....	-12.2.....	-1.83
March.....	+0.1.....	+0.37
April.....	+0.8.....	+3.51
May.....	-2.8.....	+0.63
June.....	-0.1.....	-0.81
July.....	-2.6.....	-0.19
August.....	+0.5.....	-0.59
September.....	+4.5.....	-4.00

### Rust in Small Grain.

The rust disease of wheat, oats, barley and grasses generally, are caused by one or more of three species of microscopic fungi. The most common rust on grasses in this State is *Puccinia graminis*, generally called "Mildew" on grasses, and "Black Rust" on cereals. Our most common rust fungus on small grain is *Puccinia Rubigo-vera*, usually called "Red Rust." *Puccinia coronata*, also called Red rust is the third. The last species is more common on oats than on any other and might be properly called oat rust. All three species belong to the class of parasitic fungi called *Heterocismal*, that is to say, fungi which at different times in the cycle of their growth live as parasites upon two or more hosts. Grass mildew, *Puccinia graminis*, begins its spring growth by attacking the young leaves of the Barberry, Mahonia, and possibly other shrubs. Upon these it produces small redish patches with elevated margins called "cluster cups." These cups are filled with the red *Aecidio* spores of the fungus which wafted by the air or carried by insects, birds or other agent fall upon the leaves of grasses or cereal grains and there penetrate the leaves through the breathing spores. Once within the leaf the spore sends forth a net work of root-like tissue called Mycelum. Through this, it sucks up the sap that should go to nourish the seeds of the plant and these latter shrivel up. Very soon the fungus bursts through the epidermis of the leaf and appears upon the outside as the well known, elongated, narrow red spots, popularly called "Red rust." These are the uredo spores of the fungus and are able to reproduce themselves upon the same or other grass like plants and subsequently they produce the last form in the life cycle, the black, telento spores which form the narrow black lines seen on the leaves and stems of cereals and grasses in late summer and fall. These black spores are the winter or resting spores and will under favorable circumstances retain their vitality in the straw or even on the ground for a year or more. Eventually some of them alight upon the leaves of their alternate host and there produce again the cluster cups and *Aecidio* spores and these the uredo and telento spores.

The three fungi which attack grasses and cereals do not all have the same alternate host. *Puccinia graminis* has for alternate hosts, the barberry, mahonia and probably other shrubs. *Puccinia coronata*, has for its alternate hosts the buck thorns, *Rhamus lanceolata*, *frangula* and other species. *Puccinia Rubigo-vera* has for its alternate hosts the common and disagreeable weeds Viper's bugloss, *Echium vulgare*, and Gromwell, *Lithospermum arvense*.

Knowing that to complete their cycle of growth these fungi require a host widely different from grasses and grains if we could extirpate all such host plants within a half mile or so of a grain or grass field we could effectually stop their further development. Yet we can not hope to exterminate these pests in one or two seasons even by completely destroying their alternate host-plant. Once the "Red rust" or uredo spores of the *Coronata* and *Rub-*

ago vera spores are produced on grains or cereals, these in our warm climate where growing gummy plants are found in a green condition all the year round may go on reproducing themselves indefinitely as well as producing at the same time the succeeding black form, the telesto spores, which are then able to stock the ground or infect any chance alternate host plant which negligence or accident may allow to remain.

As these spores are extremely small and light and are produced in almost incredible numbers the few alternate host plants which may survive even the most watchful care may supply acidic spores enough to infect hundreds of acres of grass or grain.

Common and destructive as the rust fungi are in the United States, in Australia they are still more so and several conventions of scientific men and practical farmers have been held there to devise methods for repressing the pests but so far without much success. Practical experience recommends the following measures:

1. Use dry or well drained land for small grains.
2. Plant only hard stemmed, hairy, early maturing varieties of wheat.
3. Plant those varieties which in your locality resist rust best—the so-called "Rust proof" wheat and oats.
4. Sow thinly to give plenty of sunlight and air to the plants.
5. Plow the land deeply as soon as the crop is harvested to destroy volunteer growth or burn the stubble and straw on the field. The latter plan is best where grain is grown on a large scale.
6. Carefully search out and destroy all alternate host plants found within one half mile of a wheat or oat field.
7. Rotate crops so that some crop other than grasses or cereals will come on the land each two years out of three.
8. The use of fungicidal sprays on growing grain has not so far given satisfactory results. The best fungicides for this class of plants are: 1. Simple solution of Iron Sulphate. 2. Copper acetate. Directions:—Apply in the finest possible spray as soon as the grain begins to flower—repeat every ten days until grain is in the dough. Then harvest it. For formulas for preparing these fungicides see bulletin No. 84 of this Station—Formulas 1 and 3 page 7—Gerald McCarthy, N. C. Experiment Station.

**Advanced Monthly Summary of Meteorological Reports for North Carolina, September, 1895**

The North Carolina State Weather Service, issues the following advanced summary of the weather for September, 1895, as compared with corresponding month of previous years:

**TEMPERATURE.**—The mean temperature for the month was 74.2 degrees, which is 4.0 degrees above the normal. The highest monthly mean was 78.4 at Newbern; lowest monthly mean 62.6 at Lenoir. The highest temperature was 104 on the 22d and 23d, at Tarboro; lowest 32 on the 30th, at Blowing Rock and Highlands. The warmest September during past twenty two years was in 1881, with mean 74.9 degrees, the next warmest is September, 1895. The coldest September was in 1875, mean 67.0 degrees.

**PRECIPITATION.**—Average for the month 1.25 inches, which is 3.40 inches below the normal. The greatest amount was at Hatteras; least amount 0.05 at Kitty Hawk. The wettest September occurred in 1877, with an average of 10.18 inches. This September of 1895 was the driest on record for past twenty-two years.

**WIND.**—Prevailing direction, South-west. The normal direction is east.

quoted from many years observations is northeast. Average hourly velocity, 6.5 miles. Highest velocity, 48 miles an hour from the Northeast on the 30th at Kitty Hawk.

**MISCELLANEOUS.**—Thunderstorms occurred at various places on the 1st, 5th, 6th, 8th, 9th, 13th, 16th, 17th, 18th, 19th. Lunar halos on the 2d, Solar halos on 2d and 3d. Meteor observed at Settle on 22d. Frosts appeared in the western portion of the State on the 29th and 30th.

Middle store in Opera House Block.

**OUR SCRAP BOOK.**

**Look Through and See Whose Faces You Find.**

Rev. A. Greaves left for Kinston Monday evening.

Miss Lizzie Peebles returned from Centerville this morning.

B. S. Wilson left this morning for Atlanta to take a telegraph position.

The King House has purchased a very handsome wagonette for a passenger transfer.

Rev. W. H. Cobb, of Whitakers, spent Monday night here with J. B. Latham and went out to the convention at Farmville to-day.

B. B. Smith, of the Beaufort County Lumber Co., was here Monday returning to Ayden. He says his company is now surveying the route for a railway from Bayboro to some point on the Atlantic Coast Line near Greenville or Ayden. Our people should interest themselves in getting the road to come here.

**Another Industry.**

Riverside Nurseries has started a new enterprise, that of wine manufacturing. Sheriff Warren tells us he never saw such a bountiful grape crop as grew this season. The Nurseries alone shipped 5,000 pounds besides having a great many to convert into wine.

**Man Killed.**

Marcellus Hall, a colored man who drives for T. W. Carr, of Greene county, was here this morning after a load of goods for Mr Carr. He had loaded his wagon and started to leave town about 10 o'clock, and when turning the corner at Five Points the wagon slightly careened throwing Marcellus off the sack of coffee upon which he was sitting. He fell on the tongue of the wagon against the mules frightening them into a canter. When the team had gone about 30 yards down the avenue the man fell to the ground, two wheels of the heavily loaded wagon passing over his face and neck, killing him almost instantly. The man's right jaw was badly crushed and his neck broken. The Coroner, Dr. Laughinghouse, was notified and viewed the body but deemed an inquest unnecessary. Marcellus had been driving for Mr. Carr for many years.
